

ESG Strategic Performance and Disclosure Analysis of Hyprop Investments Limited (2014–2023)

Company Identification and Strategic Positioning

Hyprop Investments Limited is a specialized, retail-focused Real Estate Investment Trust (REIT) primarily listed on the Johannesburg Stock Exchange (JSE) under the ticker symbol HYP and additionally traded on the A2X exchange under the ticker HYPJ.¹ The corporation’s legal identity is established as Hyprop Investments Limited, a public company incorporated in accordance with the laws of South Africa, with its headquarters situated at 2nd Floor, Cradock Heights, 21 Cradock Avenue, Rosebank, Johannesburg.¹ The entity’s primary business activity encompasses the ownership, strategic management, and comprehensive redevelopment of high-quality retail centers located in high-growth mixed-use precincts within key economic nodes.¹

The operational structure of Hyprop is segmented into three distinct geographic regions: South Africa (SA), Eastern Europe (EE), and Sub-Saharan Africa (SSA), excluding South Africa.¹ The South African portfolio represents the core of the business, featuring premier assets such as Canal Walk, Clearwater Mall, The Glen Shopping Centre, Woodlands Boulevard, CapeGate Shopping Centre, Somerset Mall, Rosebank Mall, and Hyde Park Corner.⁷ The Eastern European segment is managed through the subsidiary Hyprop Europe and includes dominant shopping destinations like The Mall in Sofia (Bulgaria), City Center one East and City Center one West in Zagreb (Croatia), and Skopje City Mall in Skopje (North Macedonia).⁸ The SSA segment, held jointly with partners such as Attacq Limited, includes interests in retail centers in Zambia, Ghana, and Nigeria, most notably Ikeja City Mall in Lagos.⁷

Regional Segments	South Africa, Eastern Europe, Sub-Saharan Africa	¹
Principal Ticker Used	HYP.SJ is the primary JSE identifier	³

The strategic mandate of Hyprop has undergone a significant transformation over the last decade, migrating from traditional property management toward a philosophy of "conscious retail".² This approach seeks to redefine the shopping center as a "modern village" that bridges the gap between digital and physical commerce while fostering deep community connections.⁶ By positioning its assets as the "modern town square," the corporation aims to ensure the long-term relevance of its portfolio in an increasingly digitized economy.⁶ This transformation is underpinned by a robust Environmental, Social, and Governance (ESG) framework, which Hyprop identifies as essential for protecting enterprise value and delivering sustainable growth.²

Environmental Stewardship and Climate Mitigation Strategies

The environmental dimension of Hyprop's ESG strategy is dictated by the unique challenges of the South African operating environment, characterized by systemic energy instability and water scarcity.¹³ The corporation has adopted a proactive stance, utilizing technical audits and long-term roadmaps to decouple its operational resilience from traditional fossil fuel dependence and municipal water constraints.¹³

Energy Infrastructure and Renewable Transition

Hyprop's energy management strategy is primarily focused on reducing Scope 2 emissions, which stem from electricity consumption across its centers, and mitigating the operational risks posed by the South African power crisis (load-shedding).¹⁴ To achieve these objectives, the corporation has implemented a multi-phased solar-PV rollout and extensive energy efficiency upgrades.¹⁵ The transition to solar power began in 2014 with a 500 kWp installation at Clearwater Mall, which was subsequently expanded in 2015, 2017, and 2020.¹⁵ By 2023, the total solar-PV capacity across the South African portfolio reached nearly 2,000 kWp, with significant contributions from Woodlands Boulevard and The Glen.¹⁵

The reliance on diesel generators during periods of load-shedding significantly impacts Scope 1 emissions. In FY2023, absolute gross Scope 1 emissions increased by 37.9% to 24,787 tCO_2e , reflecting the intensity of the power crisis during that period.¹⁴ However, a reversal of this trend was observed in 2024, with Scope 1 emissions in South Africa and Nigeria decreasing by approximately 50% due to improved grid stability in South Africa and the adoption of alternate electricity suppliers in Nigeria.¹³ This volatility underscores the importance of energy efficiency measures, such as the 2012-2023 transition to LED lighting and the implementation of IOT.NXT systems at Clearwater Mall to optimize real-time energy usage.¹⁵

Energy Metric (SA Portfolio)	Unit	FY2020	FY2021	FY2022	FY2023
Total Energy Consumed	kWh	203,940,226	195,325,072	183,528,000	152,843,750
Total Solar Energy Produced	GJ	12,232	38,266	38,462	38,555
Diesel Generation Emissions	GJ	92,084	76,556	98,475	157,383
Energy Use Intensity (Retail)	kWh/ m^2	273	269	265	231
Energy Consumption Coverage	% Area	100%	100%	100%	100%

Data from the 2023 ESG Data Pack indicates a consistent reduction in energy use intensity for the retail segment, dropping from 273 kWh/ m^2 in 2020 to 231 kWh/ m^2 in 2023.¹⁴ This improvement is attributed to the systematic implementation of energy-saving technologies and the ongoing recalibration of cooling systems, including the conversion of wet cooling towers to dry cooling towers.¹⁴

Water Resource Management and Security

Water security is a material risk for Hyprop, particularly for its assets in the Western Cape and Gauteng provinces of South Africa.¹⁴ The corporation's approach to water conservation is built upon granular data collection, achieved through 100% metering of floor area and 82% separate metering of tenants by area in 2023.¹⁴ Technological interventions have been central to reducing water withdrawal, most notably the installation of Propelair high-efficiency toilets and waterless urinals.¹⁴

Hyprop's submission to the CDP Water Security questionnaire resulted in a B+ score in 2022, an improvement from B- in 2021, reflecting enhanced risk management processes and disclosure transparency.¹⁶ While total water withdrawal saw a fluctuation, with a 5.47% increase in FY2023 compared to FY2022, the corporation continues to refine its "water usage footprint" by managing discharge and cooling tower consumption.¹⁴ The water intensity for retail centers remained relatively stable at approximately 0.98 kl/ m^2 in 2023.¹⁴

Water Metric (Portfolio)	Unit	FY2020	FY2021	FY2022	FY2023
Total Water Withdrawal	kl	689,853	645,326	621,415	655,409
Withdrawal Change	%	-	-6.45%	-6.50%	+5.47%
Water Metering	% Area	80%	80%	80%	82%

(Tenants)					
Water Intensity (Retail)	kl/ m^2	0.97	0.91	0.94	0.98

Circular Economy and Waste Diversion

The most significant environmental milestone for Hyprop in recent years is the commitment to achieving Net Zero Waste (NZW) to landfill by 2027.¹³ This roadmap is managed through a partnership with "Don't Waste," a specialized service provider that conducts audits and manages recycling operations across the South African portfolio.¹³ In 2021, comprehensive waste audits identified organic waste as the primary component of landfill contributions, leading to the implementation of the "Roadmap to Zero Waste".¹³

In 2022, Hyprop became the first REIT in South Africa to implement a portfolio-wide zero wet waste strategy.¹⁶ This involved the separation of all food and organic waste at the source, diverting it to composting or valorization facilities.¹⁶ By FY2024, the corporation achieved the diversion of 807 tonnes of organic waste annually, up from the milestone of 1,000 cumulative tonnes reached in late 2023.¹³ The overall recycling rate by volume for the South African centers reached 81% in 2024, a notable improvement from 77% in 2020.¹³

Waste Metric (SA Portfolio)	Unit	FY2020	FY2021	FY2022	FY2023	FY2024
Total Waste Generated	Tonnes	5,942	5,971	6,110	6,194	6,020
Waste Recycled (Volume)	%	77%	78%	79%	79%	81%

Waste Recycled (Weight)	%	41%	43%	46%	60%	67%
Organic Waste Diverted	Tonnes	–	–	Trial	1,000+ (cum)	807

The implications of this waste strategy extend beyond simple diversion metrics. By complying with the Organic Waste Ban in the Western Cape and proactively applying similar standards in Gauteng, Hyprop has effectively future-proofed its operations against emerging environmental regulations.¹³ Furthermore, the reduction in hazardous waste—from 94 tonnes in 2021 to effectively zero in 2022—is a direct result of the landfill ban on e-waste and fluorescent tubes, which the company now routes through specialized recycling channels.¹⁶

Social Impact and Community Relationship Capital

Hyprop's social strategy is anchored in the "Golden Thread" philosophy, which seeks to integrate the shopping center into the daily lives of the communities it serves.² This approach recognizes that the long-term sustainability of a retail asset is intrinsically linked to the economic and social health of its surrounding nodes.²

The Modern Village and Community Connection

The concept of the "modern village" represents Hyprop's response to the growing social disconnection caused by digital fragmentation.⁶ By redeveloping assets into mixed-use precincts, the corporation creates spaces where community members can connect both physically and digitally.⁶ This strategy involves not only the curation of retail tenants but also the provision of safe, clean, and engaging environments that encourage high footfall and dwell time.¹⁹ In 2023, the South African portfolio recorded an annual footcount of millions across its major centers, reflecting the continued success of this community-centric model.⁹

Corporate Social Investment (CSI) is channeled primarily through the Hyprop Foundation, which was established to manage high-impact community projects.¹⁰ While early reports (2015-2016) provided separate "Foundation Reports," these activities are now fully integrated into the annual ESG reporting cycle.¹⁶ The foundation's work is aligned with specific UN SDGs, particularly SDG 8 (Decent Work and Economic Growth) and SDG 11 (Sustainable Cities and Communities).¹⁵

Human Capital and Workforce Transformation

Hyprop prioritizes the development of a diverse and highly skilled workforce, viewing its employees—referred to as "HYperformers"—as critical enablers of its ESG strategy.² The corporation's HR structure is designed to promote an empowering and high-performance culture, with management teams deployed directly at the shopping centers to ensure operational excellence and deep tenant relationships.¹⁴

In the South African context, the corporation is deeply committed to Broad-Based Black Economic Empowerment (B-BBEE) and employment equity.¹⁶ The training strategy is designed to enhance the internal skills base and increase eligibility for promotion from within, thereby redressing historical workplace disadvantages.¹⁹ The 2023 ESG Data Pack emphasizes that this "empowering culture" is essential for fostering innovation in environmental and social impact initiatives.¹⁴

Social & Human Capital Metric	Description	Source
Total Employees	Approximately 237 specialists (2026 data)	1
Training Strategy	Focused on skill enhancement and employment equity	19
CSI Alignment	Direct focus on SDGs 6, 7, 8, 11, and 12	15
Stakeholder Connection	Philosophy of the "Golden Thread" and "Modern Village"	2
Tenant Metering	100% for electricity to encourage conservation	14

Governance Frameworks and Ethical Integrity

The "Governance" pillar at Hyprop is defined by a robust adherence to the King IV Code and the implementation of transparent reporting structures that satisfy the requirements of the JSE and global investors.⁴ Governance is not merely seen as a compliance exercise but as a

framework for informed decision-making and risk management.²

Board Responsibility and Committees

The Board of Directors holds primary responsibility for the corporation's strategy and the integrity of its integrated annual reports.⁴ The governance structure is supported by several specialized committees that provide oversight in critical areas:

1. **Audit and Risk Committee (ARC):** The ARC is tasked with monitoring the integrity of financial reporting, overseeing the combined assurance model, and managing the group's risk profile.⁴ It also oversees the rotation of external auditors and property valuers.²²
2. **Social and Ethics Committee:** This committee monitors the group's performance against social, economic, and environmental targets.¹⁵ It ensures that the "Golden Thread" strategy is effectively implemented across the portfolio.¹⁶
3. **Remuneration Committee:** Increasingly, the remuneration of executive directors is being linked to the achievement of specific ESG milestones, such as energy reduction and waste diversion targets.¹⁶

Ethics and Corporate Conduct

Hyprop maintains a strict ethical code, focusing on transparency and sustainable business practices.¹⁰ However, the corporation operates in a complex environment where reputational risks are high. In 2025, the company had to issue a formal warning regarding a fraudulent Telegram group that was using its name to solicit illegal investments.⁶ This proactive communication was necessary to protect stakeholders and maintain the integrity of the Hyprop brand.

A major governance challenge occurred during Hyprop's conditional voluntary bid to acquire a controlling interest in MAS Real Estate in 2025.²³ The bid was met with opposition from Prime Kapital, which cited "significant governance and regulatory red flags" and urged MAS shareholders to reject the offer.²⁴ The bid was eventually terminated due to Hyprop's inability to access certain joint venture agreements and a lack of prior engagement with the MAS Board.²³ While the transaction did not proceed, the public disclosure surrounding the termination adhered to the transparency standards expected of a JSE-listed entity.²³

ESG Reporting Timeline and Framework Evolution (2014–2023)

The reporting journey of Hyprop Investments illustrates a transition from basic environmental disclosure to a sophisticated, integrated model that prioritizes double materiality.⁹

2014–2016: Establishing the Foundation

This period was characterized by the initial institutionalization of ESG reporting. In 2014, Hyprop made its first submissions to the CDP and GRESB, establishing the environmental baselines that would guide the next decade of strategy.¹⁵ The 2015 and 2016 reports introduced the "Foundation Report," a separate document detailing the group's social investments and community relationship capital.¹⁰ These early reports were essential for defining the group's "Social License to Operate" in a volatile emerging market context.¹⁰

2017–2019: Technical Calibration and Governance

In 2017, the corporation achieved its first Green Building Certification for Canal Walk, signaling a move toward technical validation of its asset management practices.¹⁵ The adoption of the King IV Code in 2019 provided a more rigorous governance framework, emphasizing the role of the Social and Ethics Committee.⁴ By 2018, the introduction of WDP reporting reflected a maturing understanding of water security as a systemic risk.¹⁵

2020–2023: Resilience, Net Zero, and Ratings Upgrades

The global pandemic in 2020 forced the company to use its centers' lower occupancy periods to conduct ASHRAE energy audits, establishing a more accurate baseline for its energy intensity reduction goals.¹⁶ In 2021, the focus shifted toward waste circularity with the initiation of zero-waste audits.¹³

The year 2022 was a watershed moment for Hyprop's ESG strategy, marked by the commitment to achieve Net Zero Waste by 2027 and the securing of an initial R200 million sustainability-linked financing facility.¹³ By 2023, the corporation's reporting had reached a high degree of maturity, characterized by the publication of a separate "ESG Data Pack" aligned with the JSE Sustainability Disclosure Guidance.¹⁴ This maturity was externally validated by MSCI, which upgraded Hyprop's rating to "AA" in June 2023, specifically noting advances in green building initiatives and corporate governance.¹⁵

Year	Milestone	Relevance to ESG Transparency
2014	First CDP & GRESB Submissions	Inception of standardized environmental disclosure. ¹⁵
2017	First Green Building Certification	External validation of asset efficiency. ¹⁵
2018	First WDP Submission	Formalizing water security

		as a material reporting theme. ¹⁵
2019	King IV Adoption	Alignment with the highest standards of corporate governance in SA. ⁴
2020	ASHRAE Level 1 & 2 Audits	Data-driven approach to energy baseline establishment. ¹⁶
2021	Zero Waste Audits	Identifying organic waste as the primary diversion priority. ¹³
2022	Net Zero Waste 2027 Commitment	Setting long-term, measurable climate goals. ¹³
2022	R200m Sustainability Funding	Linking ESG performance directly to capital costs. ¹⁷
2023	MSCI Upgrade to "AA"	Global recognition as an ESG leader in the REIT sector. ¹⁵
2023	Double Materiality Analysis	Recognizing both internal and external ESG impacts. ⁹

Reference Table and Credibility Assessment

The analysis presented in this report is derived from a variety of primary and secondary sources, each assessed for its credibility and relevance to the Hyprop ESG narrative.

#	Reference (APA 7th edition format)	Source Type	Credibility Score (0–10)	Justification for Score	Relevance to Query

External Ratings, Assurance, and Performance Benchmarks

The credibility of Hyprop's ESG disclosures is supported by a series of external validations, ranging from financial audits to environmental benchmarks and international ratings.¹⁵

Financial and Operational Assurance

Hyprop employs a "combined assurance model" to ensure the reliability of the information provided in its integrated reports.⁴ The consolidated and separate financial statements for the year ended 30 June 2023 were audited by KPMG Inc., which issued an unqualified (unmodified) audit report.⁴ The scope of this audit, however, was limited to the financial information on pages 108 to 243, meaning that much of the qualitative and technical ESG data in the separate ESG Report and Data Pack is non-IFRS information.⁹

For non-financial metrics, Hyprop relies on specialist third-party validations rather than a single limited assurance statement from a big-four accounting firm. For example:

- **Waste Management:** Data and performance are managed and audited by "Don't Waste," an external specialist provider.¹³
- **Green Buildings:** Certifications for centers like Canal Walk and the Eastern European centers are provided by the GBCSA and BREEAM (Building Research Establishment Environmental Assessment Method).¹³
- **Energy Audits:** Technical energy intensity baselines were established through ASHRAE

Level 1 and 2 audits conducted by independent engineering specialists.¹⁶

ESG Rating Agency Performance

The corporation's ESG performance is monitored by several global rating agencies, which provide a relative measure of risk management compared to its peers:

- **MSCI ESG Rating:** Hyprop was upgraded to "AA" in June 2023, placing it in the "Leader" category. This rating reflects the corporation's high standard of corporate governance and its proactive approach to green building initiatives.¹⁵
- **S&P Global ESG Score:** As of late 2025, S&P Global assigned Hyprop an ESG score of 35 based on its Corporate Sustainability Assessment (CSA).²⁶ This score reflects a moderate level of sustainability performance compared to the global REIT universe.²⁶
- **GRESB Score:** Hyprop's 8th submission to GRESB resulted in a score of 73% in 2022, an improvement from 68% in the previous year and currently in line with the industry average.¹⁶

Rating Agency	Score/Rating	Year	Key Driver
MSCI	AA	2023	Governance and Green Building advances. ¹⁵
GRESB	73%	2022	Data coverage and sustainability management. ¹⁶
CDP (Climate)	B-	2022	Management of climate risks and opportunities. ¹⁶
CDP (Water)	B+	2022	Enhanced water security disclosure. ¹⁶
S&P Global	35	2025	Corporate Sustainability Assessment respondent. ²⁶

Transparency, Data Limitations, and Verification

While the information provided in this report is based on the most current available data from Hyprop Investments and reputable third-party sources, there are inherent limitations that must be acknowledged.

Knowledge Cutoff and Data Availability

The research knowledge cutoff date is effectively March 2026, incorporating reports and results released up to and including the March 10, 2026, interim results for the six months ended 31 December 2025.² Data for the 2014–2023 period is primarily sourced from archival integrated reports and the recently introduced ESG Data Packs.¹⁴

Specific Limitations and "Unverified" Information

The following limitations were identified during the analysis:

1. **GRI and SASB Indices:** While Hyprop's reporting aligns with many GRI (Global Reporting Initiative) and SASB (Sustainability Accounting Standards Board) metrics—such as Scope 1–3 emissions and tenant energy use—the 2023 reporting suite does not explicitly feature a formal SASB or TCFD (Task Force on Climate-related Financial Disclosures) cross-reference index.⁹ Therefore, explicit compliance claims for these specific frameworks are "Unverified" in terms of formal indexing, though substantial alignment exists in the data presented.¹⁴
2. **Eastern European Baseline Data:** Environmental reporting for the Eastern European portfolio (Bulgaria, Croatia, North Macedonia) is currently less granular than for the South African segment. Comprehensive consolidated views for these centers only became effective in FY2023.⁹ Historical environmental data for the EE segment prior to 2022 is largely unavailable or unverified in the public domain.¹³
3. **Third-Party Assurance of Non-Financials:** As noted, there is no single, separate limited assurance report for all non-financial ESG KPIs in the 2021–2023 cycles.¹⁵ Data should be interpreted as management-reported, supported by specialized technical audits (e.g., Don't Waste or ASHRAE) rather than comprehensive external accounting assurance.

Independent Verification Recommendations

Stakeholders seeking to independently verify the information presented in this report should consult the following authoritative external databases:

- **JSE SENS (Stock Exchange News Service):** For all official regulatory announcements regarding disposals, acquisitions, and financial results.
- **Hyprop Investor Relations Archive:** Access the full PDF versions of Integrated Annual Reports, ESG Reports, and ESG Data Packs (available at <https://www.hyprop.co.za/reports-archive.php>).
- **The CDP Disclosure Platform:** Review the company's detailed annual responses to the Climate Change and Water Security questionnaires.
- **GBCSA / BREEAM Databases:** Verify the certification status and ratings of individual

shopping centers within the portfolio.

Conclusions and Strategic Trajectory

The decade spanning 2014 to 2023 has been a period of profound evolution for Hyprop Investments Limited. The corporation has transitioned from a traditional retail landlord to a sophisticated property investment vehicle that recognizes ESG as a fundamental driver of enterprise value.² By adopting a "double materiality" approach, Hyprop has signaled its commitment to understanding not only how ESG factors impact its own financial health but also how its operations impact the broader economy, society, and environment.⁹

The implications of the transition toward Net Zero Waste and the expansion of solar-PV capacity are particularly significant in the South African context. These initiatives not only reduce the corporation's environmental footprint but also serve as a critical risk mitigation strategy against the failures of state-provided utilities.¹³ Furthermore, the strategic focus on the "modern village" ensures that Hyprop's assets remain integrated into the social fabric of their communities, providing a compelling competitive advantage in a retail landscape being reshaped by e-commerce.⁶

While governance challenges, such as the termination of the MAS Real Estate bid, have tested the group's transparency and engagement models, the overall trajectory remains one of increasing reporting maturity.¹⁵ The 2023 upgrade to an MSCI "AA" rating stands as a definitive external validation of this progress, positioning Hyprop as a leader among its global REIT peers.¹⁵ As the corporation moves toward its 2027 Net Zero Waste target, the continued refinement of its ESG Data Pack and the potential adoption of more formal assurance for non-financial metrics will be essential for maintaining its standing with sophisticated institutional investors.
