

ESG Strategic Integration and Sustainability Performance: A Longitudinal Analysis of Even Construtora e Incorporadora S.A. (2014–2023)

Company Identification and Corporate Overview

The subject of this analysis is Even Construtora e Incorporadora S.A., a prominent entity in the Brazilian real estate development and civil construction landscape. Identified on the B3 (Bolsa, Brasil, Balcão) under the ticker symbol EVEN3.SA, the company operates primarily within the Consumer Durables sector and the Homebuilding industry classification.¹ Even Construtora e Incorporadora S.A. is a publicly traded corporation with its headquarters situated at Rua Hungria, 1.400, 2nd floor, Jardim América, São Paulo, SP, 01455-000, Brazil.¹

The primary business activity of the organization encompasses the entire lifecycle of real estate development, including land prospecting, project appraisal, acquisition, development planning, and the eventual construction and sale of residential and commercial properties.⁴ A defining characteristic of the firm’s operational strategy is its vertical integration. By internalizing all stages of the process—from the identification of land to post-sales customer service—the company maintains direct oversight of its value chain, which serves as a critical mechanism for the implementation and monitoring of Environmental, Social, and Governance (ESG) standards.⁵ This vertical model includes dedicated sales subsidiaries, Even Vendas and Even More, which together deploy a force of nearly one thousand independent brokers to commercialize the company's projects, primarily focused on the high-end residential segment in strategic neighborhoods of São Paulo.⁵

Founded in 1974 and listed on the BOVESPA (now B3) since April 2007, the company has historically positioned itself as a market leader in sustainability disclosure.¹ It was the first publicly held company in its sector to publish a Sustainability Report and the first to conduct a comprehensive carbon inventory, a practice it initiated in 2008.⁷ The identification and classification of the company are corroborated by official exchange listings, corporate investor relations disclosures, and financial data providers such as Simply Wall Street and EMIS.¹

Feature	Detailed Description	Source Verification

Market Listing	Novo Mercado (B3)	1
Date of Listing	April 2007	1

ESG Report Timeline Analysis (2014–2023)

The decade spanning 2014 to 2023 represents a period of significant maturation and occasional structural shifts in the company's sustainability disclosure practices. The analysis of this timeline reveals a transition from foundational sustainability reporting toward highly standardized ESG metrics aligned with global financial disclosure requirements.

Early Period Maturation (2014–2017)

During the initial years of this analysis, the organization maintained its status as a pioneer in the Brazilian homebuilding sector's sustainability efforts. Following the publication of its early reports, the company continued to refine its data collection for carbon inventories and social impact metrics.⁷ In 2015, the firm achieved a milestone by initiating a broader program for neutralizing carbon emissions across its construction sites.⁹ This period was marked by consistent reporting that highlighted the firm's inclusion in the B3 Corporate Sustainability Index (ISE), a recognition that underscored its adherence to higher standards of social and environmental responsibility compared to its peers.⁷

In 2017, the company published a significant sustainability report that served as the primary disclosure for several years.⁸ This report utilized the Global Reporting Initiative (GRI) framework, which was the prevailing standard for non-financial disclosure in Brazil at the time. The 2017 disclosure focused heavily on operational efficiency, waste management, and the "Fantastic Products" concept—projects designed to minimize negative environmental impacts

while maximizing contemporary social utility.⁸

Reporting Gap and Strategic Realignment (2018–2020)

Following the 2017 report, the company experienced a period of reduced formal sustainability disclosure. While annual financial statements and corporate governance reports continued to be filed with the CVM (Comissão de Valores Mobiliários), a standalone sustainability or integrated ESG report was not published between 2018 and 2020.⁸ This gap often correlates with periods of internal reorganization or shifts in market strategy within the capital-intensive real estate sector.

Despite the absence of a dedicated report, the company maintained its commitment to carbon neutralization, reporting later that the cumulative neutralization of emissions across 47 construction sites continued throughout this period.⁹ In 2020, a major corporate milestone occurred with the public offering of common shares for the company's subsidiary, Melnick Even Desenvolvimento Imobiliário S.A..¹¹ While primarily a financial and capital-structure event, this IPO necessitated rigorous disclosure of governance practices and risk factors, indirectly contributing to the company's transparency regarding its decentralized operations in southern Brazil.¹¹

Resurgence and Framework Standardization (2021–2023)

The most decisive development in the recent timeline occurred in 2022 with the publication of the Annual and Sustainability Report for the 2021 base year.⁸ This report marked a return to formal sustainability disclosure with a much higher degree of technical rigor. It adopted a multi-framework approach, aligning with the GRI 2021 Standards, the Sustainability Accounting Standards Board (SASB) for Home Builders, and the Task Force on Climate-Related Financial Disclosures (TCFD).⁶

In 2023, the organization achieved a major regulatory and market milestone by re-entering the portfolio of the B3 Corporate Sustainability Index (ISE).⁶ The company's re-entry was the result of a deliberate strategic goal to align its internal indicators with the index's evolving ESG methodology. The firm established a medium-term target to maintain its position in the ISE portfolio through 2027 and to achieve an improved score within the 70% to 75% range.⁶ This period also saw the establishment of the ESG Executive Committee, formalizing the oversight of sustainability initiatives at the senior management level.¹²

Year	Key ESG Development / Milestone	Description and Significance	Source
------	---------------------------------	------------------------------	--------

2015	Carbon Neutrality Launch	Initiation of the program to neutralize emissions from all delivered projects and the corporate office.	9
2017	GRI Sustainability Report	Publication of a comprehensive report utilizing the GRI framework; emphasized "Fantastic Products."	8
2020	Melnick Subsidiary IPO	Significant governance event; public disclosure of subsidiary risks and governance during IPO.	11
2022	11th Sustainability Report	Return to formal reporting for the 2021 base year; adoption of GRI, SASB, and TCFD frameworks.	8
2022	CDP Rating (C Score)	Achieved a 'C' grade in the Carbon Disclosure Project, indicating an awareness level of climate issues.	6
2023	ISE B3 Inclusion	Re-entry into the Corporate Sustainability Index; recognized for	6

		improved ESG practices and disclosure.	
2023	ESG Executive Committee	Formal establishment of a dedicated committee to oversee the integration of ESG into business routines.	12

Framework Adoption and Disclosure Standards

The organization's current disclosure architecture is built upon a foundation of internationally recognized frameworks, ensuring that sustainability data is comparable, consistent, and relevant to a global investor audience. The adoption of these frameworks represents a causal link between institutional investor pressure and corporate transparency.

Global Reporting Initiative (GRI) Standards

The 2022 report was prepared in accordance with the GRI 2021 Universal Standards, focusing on the most significant impacts of the organization on the economy, environment, and people.⁸ The materiality assessment used to inform this disclosure involved online surveys with over 100 stakeholders, including investors, employees, suppliers, and neighbors.⁸ This process identified 12 priority topics, such as energy management, water usage, and biodiversity, which now form the core of the company's reporting KPIs.⁸

Specifically, the report includes detailed indicators such as GRI 302-1 (Energy consumption within the organization), GRI 305-1 (Direct Scope 1 GHG emissions), and GRI 403-9 (Work-related injuries).⁶ By utilizing these standardized metrics, the firm allows analysts to evaluate its resource efficiency and safety record against both domestic and international benchmarks in the construction industry.

Sustainability Accounting Standards Board (SASB)

In addition to the GRI, the organization has integrated SASB indicators specific to the "Home Builders" sector.⁶ Unlike the broader GRI, SASB focus specifically on the subset of sustainability issues that are financially material to a company's enterprise value. Key SASB metrics disclosed by the firm include land use and design impacts, climate change adaptation strategies, and workforce health and safety statistics.⁶ This adoption is particularly relevant for the high-end residential segment, where land use efficiency and climate resilience are increasingly viewed as

long-term drivers of asset value.

Task Force on Climate-Related Financial Disclosures (TCFD)

The alignment with TCFD recommendations addresses the growing need for transparency regarding climate-related financial risks.⁶ The company's reporting explores how it governs climate risks, the resilience of its strategy under various climate scenarios, and the metrics used to track its transition toward a lower-carbon business model. This is especially critical for a developer whose assets are geographically concentrated in São Paulo, where changing weather patterns and urban heat impacts can affect building performance and regulatory compliance costs.

Carbon Disclosure Project (CDP)

Participation in the CDP questionnaires represents an external assessment of the company's climate and water security strategies. In 2022, the organization received a "C" grade in the Climate Change category.⁶ While a "C" indicates that the company has reached the "Awareness" level rather than the "Leadership" level (A or A-), it demonstrates a foundational understanding of the firm's climate-related impacts and a willingness to disclose them to the public.⁶

Environmental Performance and Decarbonization Strategy

The environmental pillar of the organization's ESG strategy is focused on minimizing the intensive footprint associated with civil construction. The evidence suggests that the company leverages its vertical model to enforce environmental standards from the site preparation phase through to the delivery of the final product.

Emissions Management and Carbon Neutralization

A central pillar of the firm's environmental strategy is its carbon neutralization program. Since 2015, the company has reportedly neutralized approximately 184,000 tons of carbon equivalent (tCO₂e) across 47 construction projects.⁹ For the 2021 reporting year, the company achieved total neutralization of GHG emissions for all delivered projects and its corporate office, amounting to 52,000 tCO₂e.¹²

The neutralization process is conducted through the acquisition of carbon credits, specifically supporting biogas projects that capture methane and prevent its release into the atmosphere.⁹ This initiative extends beyond Scope 1 and 2 emissions to include Scope 3 emissions, which encompass the carbon footprint of the production and transport of construction materials used in its projects.⁹ By neutralizing these emissions, the company markets "Carbon Neutral"

residential units, providing a tangible environmental value proposition to its customers.¹³

Resource Efficiency and Waste Management

The organization has established specific targets for reducing the consumption of critical resources. According to recent sustainability disclosures, the company has achieved a 28% reduction in energy consumption and a 23% reduction in water usage.¹² Furthermore, it has reported a 60% reduction in the "embodied energy" of construction materials, which reflects a shift toward materials with lower environmental impacts during their production phase.¹²

Waste management represents another area of high operational performance. The company reports that 98% of the waste generated at its construction sites is reused or recycled through partnerships with transshipment and screening areas (ATTs) and recycling plants.⁸ To further this goal, the company is implementing perennial reverse logistics programs designed to return solid waste from construction sites back into the production cycle, thereby reducing landfill reliance and generating potential cost savings.⁸

Environmental Metric	Reported Performance / Initiative	Impact and Relevance	Source
Project Carbon Neutrality	100% of units delivered in 2021	Neutralization of 52,000 tCO ₂ e; competitive market advantage.	⁹
Energy Efficiency	28% reduction in consumption	Lower operational costs and reduced site footprint.	¹²
Water Management	23% reduction in usage	Resilience against water scarcity and lower utility costs.	¹²
Waste Diversion	98% of waste reused or recycled	Mitigation of landfill environmental impact and regulatory risk.	⁸

Materials Innovation	60% reduction in embodied energy	Supply chain engagement to lower product's lifecycle carbon.	12
----------------------	----------------------------------	--	----

Social Impact and Human Capital Management

The social dimension of the company's ESG performance is centered on workforce safety, community relations, and the diversity of its human capital. As a major employer in the construction sector, the company's ability to manage labor risks and community impact is a critical factor in its operational continuity.

Occupational Health and Safety (OHS)

The construction industry is inherently high-risk, making safety a priority material topic. The company reported a 66% reduction in construction site accidents compared to the 2023 baseline, suggesting that investments in safety training and more rigorous site management protocols are yielding measurable results.¹² The reporting of TRIR (Total Recordable Incident Rate) and NMFR (Near-miss Frequency Rate) under the SASB framework further enables the comparison of the company's safety performance against international standards.⁶

Diversity and Inclusion (D&I)

The organization has demonstrated progress in improving the diversity of its workforce, which has traditionally been male-dominated in the civil construction sector. In 2021, women accounted for 42% of the company's new hires.⁹ Furthermore, between 2019 and 2021, the representation of Black and Brown (Pretos and Pardos) employees increased by approximately 27%.⁹ These trends are supported by internal training programs aimed at permeating a culture of quality and sustainability throughout the organizational hierarchy.⁹

Community Engagement and the "Ação Vizinho" Program

The company maintains a proactive approach to managing the impacts of its construction activities on surrounding neighborhoods. The "Ação Vizinho" (Neighbor Action) program creates a direct communication channel between the company and the residents of areas adjacent to its construction sites.¹³ This program includes initiatives such as "urban kindness" features—providing pet-friendly amenities like water bowls at site fences—and active feedback loops to mitigate noise and dust complaints.¹³

Social contributions also extend to philanthropic and educational programs. The "Somar Even" volunteer committee manages social campaigns that have reportedly benefited more than 5,000 individuals.¹² In a notable example of strategic social investment, the company redirected R\$ 100,000 in property tax (IPTU) exemptions from cultural programs toward supporting

children in vulnerable situations.¹²

Corporate Governance and Ethical Frameworks

Governance serves as the primary oversight mechanism for the company's environmental and social commitments. By listing on the Novo Mercado segment of the B3, the organization commits to the highest level of corporate governance in Brazil, which mandates a 100% tag-along right for shareholders, a minimum free float, and a majority-independent board of directors.¹

ESG Governance and Risk Management

The 2023 establishment of the ESG Executive Committee formalizes the integration of sustainability into the company's core decision-making processes.¹² This committee is tasked with reviewing supplier approval processes, which now include specific ESG criteria to ensure that the firm's supply chain partners adhere to its ethical and environmental standards.¹²

Risk management is another area of governance maturation. The company is in the process of implementing an ESG Risk Matrix, which utilizes the same methodology as its assessment of strategic and financial risks.⁶ This matrix is reviewed by the Audit Committee, ensuring that ESG-related risks—such as climate change impacts, regulatory shifts, and labor controversies—are monitored with the same rigor as traditional financial risks.⁶

Ethics and Compliance

Ethics are institutionalized through the "Ética Even" program, which provides employees and stakeholders with a Code of Conduct and a mechanism for reporting violations.¹² The company reports that 100% of its employees have been trained on and are up-to-date with this code.¹² For the 2016 fiscal year, the company's financial statements were audited by Grant Thornton, which provided a clean opinion, indicating that the statements fairly represented the company's financial position and results.¹⁵ While the financial statements are audited annually, it is important to note that the sustainability disclosures in the 2022 report did not undergo a formal third-party limited assurance process, a common but notable limitation in current ESG reporting.⁶

Governance Attribute	Status and Detailed Implementation	Source
B3 Listing	Novo Mercado (Highest Governance Standards)	¹

Oversight	ESG Executive Committee (Established 2023)	12
Risk Integration	ESG Risk Matrix reviewed by the Audit Committee	6
Ethics Training	100% Employee participation in Code of Conduct training	12
Supply Chain	ESG criteria incorporated into supplier approval	12
Audit (Financial)	Grant Thornton (Historical clean opinion provided)	15

External ESG Ratings and Market Recognition

Independent ESG ratings provide an objective benchmark for the company's performance and resilience to sustainability-related financial risks. The organization is covered by several major rating providers, whose assessments reflect a range of viewpoints on the firm's ESG maturity.

MSCI and Sustainalytics

As of 2022, the organization held a "BBB" ESG rating from MSCI.¹⁶ This rating identifies the company as an "average" performer within its industry, suggesting that while it manages some ESG risks effectively, it may still be exposed to others compared to industry leaders.¹⁷

Morningstar Sustainalytics provided an ESG Risk Rating of 23.8, which categorizes the organization as having "Medium Risk".¹⁶ This rating is derived from a two-dimensional framework that assesses the firm's exposure to industry-specific material ESG issues and its management of those issues.¹⁸ A score in the low 20s for a homebuilder indicates relatively well-managed risks compared to the broader industrial sector, which often faces higher unmanaged risks.²⁰

S&P Global and Other Ratings

The organization is also evaluated through the S&P Global Corporate Sustainability Assessment (CSA), which informs the S&P Global ESG Score.² This score focuses on past and current performance on ESG issues and is used to determine a company's inclusion in various sustainability indices.²

Alternative assessments, such as the All Street SEVVA SDG Transparency Score, provide a different lens, focused on how well a company's disclosures align with the UN Sustainable Development Goals. SEVVA assigned the company a score of 0.5 (on a scale of 0 to 8), indicating "Low Impact" or low transparency regarding the SDGs.²¹ This highlights a potential area for improvement in more clearly linking corporate outcomes to specific global development targets.

Rating Provider	Score / Rating	Category / Context	Source
MSCI	BBB	Average (Relative to Homebuilding Peers)	¹⁶
Sustainalytics	23.8	Medium Risk (Unmanaged Risk Assessment)	¹⁶
Gaia Research	58/100	General ESG Performance (2022 Campaign)	¹⁶
SEVVA	0.5	Low Impact (SDG Transparency)	²¹
CDP	C	Awareness (Climate Change Disclosure)	⁶

Strategic Analysis and Second-Order Insights

The data regarding the organization's ESG performance reveals several underlying trends that have significant implications for its long-term enterprise value and risk profile.

The Vertical Model as a Risk Mitigation Tool

The primary insight derived from the organization's structure is that its vertical business model acts as a powerful ESG risk-management mechanism. In the construction industry, the "Management Gap" often occurs at the point of subcontracting, where safety standards, waste management, and labor conditions are harder for the developer to control. By executing all stages of development internally—from land acquisition through construction to sales—the company minimizes this management gap. This internalization likely explains why the firm was

able to achieve 100% carbon neutralization for its projects and such high waste-reuse rates, as it has direct authority over the site-level operations where these impacts are most acute.⁵

The ESG Reporting Gap and "Catch-up" Dynamics

The analysis of the reporting timeline reveals a distinct "hiatus" between 2018 and 2020. This gap is not merely a lack of transparency but likely reflects a period of internal realignment to adapt to a new generation of more technical ESG standards (like SASB and TCFD). The "resurgence" of reporting in 2022 with a multi-framework, indicator-heavy report suggests that the company spent the intervening years building the data infrastructure required to meet the demands of sophisticated institutional investors. The re-entry into the ISE B3 index in 2023 is the causal result of this strategic realignment, demonstrating that the company has "caught up" to and now aligns with the highest tier of Brazilian sustainability benchmarks.⁶

Marketing Sustainability: The "Green Premium" in São Paulo

There is a clear causal relationship between the organization's focus on high-end neighborhoods in São Paulo and its aggressive environmental targets. For a premium developer, carbon neutrality is no longer just a compliance task but a critical marketing differentiator. The "Fantastic Products" and "Morar Even" programs demonstrate how the company translates complex ESG metrics—like 60% reductions in embodied energy—into consumer-facing value propositions.⁸ As urban residents in São Paulo become more climate-conscious, the ability to deliver "Carbon Neutral" homes provides a competitive advantage that can justify higher margins and drive sales velocity.

Reference Table and Credibility Assessment

The following table categorizes the sources used in this report, providing a transparent assessment of their authority and relevance to the ESG analysis of the company.

#	Reference (APA 7th edition format)	Source Type	Credibility Score (0–10)	Justification for Score	Relevance to Query
1	Even Construtora e Incorporadora S.A. (2022). Annual and	Primary (Official Report)	10	Official company disclosure filed with B3/CVM; follows GRI	Core source for timeline, frameworks, and KPIs.

	Sustainability Report 2022: Base Year 2021.			and SASB.	
2	B3 S.A. - Brasil, Bolsa, Balcão. (2023). EVEN3 Listing Information and Novo Mercado Details.	Primary (Exchange)	10	Authoritative stock exchange data; no potential for bias in listing facts.	Verification of company identity and governance segment.
3	S&P Global Sustainable1. (2024). ESG Score Result: Even Construtora e Incorporadora S.A.	Secondary (Rating Agency)	9	Leading global ESG research provider with standardized methodology.	Independent evaluation of ESG risk management.
4	Morningstar Sustainalytics. (2022). ESG Risk Ratings Report: Even Construtora.	Secondary (Rating Agency)	9	Globally recognized ESG research and rating provider.	Third-party assessment of unmanaged ESG risks.
5	Grant Thornton Auditores	Primary (Audit)	10	Independent third-party auditor	Verification of financial transparency

Transparency, Limitations, and Recommendations

This report is based on research material available as of the knowledge cutoff date of March 20, 2026. The analyst utilized a combination of official corporate filings, stock exchange data, and third-party ESG assessments to synthesize this performance review.

Known Limitations

Several critical limitations must be acknowledged for a complete understanding of the company's ESG profile:

- Lack of External ESG Assurance:** Although the organization publishes detailed GRI and SASB indicators, the 2022 Sustainability Report explicitly stated it did not undergo external limited assurance.⁶ While financial statements are audited by Grant Thornton, the non-financial sustainability metrics are self-reported. This introduces a degree of risk regarding the accuracy of reported reductions in energy and water usage.
- Historical Data Gaps:** The period between 2018 and 2020 lacks dedicated sustainability reports. While the company has since provided retrospective data for some indicators (like carbon neutralization), a year-by-year analysis of certain social metrics during this period is not possible based on current disclosures.⁸
- Unverified Claims:** Specific figures, such as the 66% reduction in construction site

accidents or the 98% waste reuse rate, are derived directly from company publications. Without third-party assurance statements, these claims should be viewed as "reported facts" rather than "verified facts".⁶

Recommendations for Further Verification

To independently verify the information presented in this report, users are encouraged to consult the following authoritative external databases:

1. **B3 Disclosure Portal (RAD/ENET):** Access the "Formulário de Referência" and the "Relatório de Governança Corporativa" for the most detailed legal disclosures on risk factors and governance structures.
2. **CDP Disclosure Search:** Retrieve the full 2022 and 2023 Climate Change questionnaire responses to examine the underlying data for the "C" rating.
3. **Global Reporting Initiative (GRI) Database:** Check for the official registration of sustainability reports and alignment with the GRI Standards.

Conclusions

Even Construtora e Incorporadora S.A. has established a robust, though evolving, ESG framework that leverages its vertically integrated business model to manage sustainability impacts directly. The company's trajectory from 2014 to 2023 demonstrates a successful transition from early-stage sustainability awareness to a more sophisticated, indicator-driven strategy that aligns with global investor expectations (GRI, SASB, TCFD). While its external ratings (MSCI BBB, Sustainalytics 23.8) place it as an average performer relative to global peers, its re-entry into the ISE B3 index and its aggressive carbon neutralization program suggest a leadership position within the Brazilian domestic market. The primary challenge moving forward will be the adoption of formal third-party assurance for its sustainability metrics to match the transparency standards of its financial disclosures. For the professional peer group, the organization represents a case study in how business model choice (verticalization) can fundamentally alter a firm's ability to execute on its ESG commitments.
