

Comprehensive Analysis of ESG Disclosure and Sustainability Performance: Anadolu Efes Biracilik ve Malt Sanayii A.S. (2014–2023)

Company Identification and Operational Scope

Anadolu Efes Biracilik ve Malt Sanayii Anonim Sirketi, hereafter referred to as Anadolu Efes or the Company, is a prominent multinational beverage corporation headquartered in Istanbul, Turkey.¹ The entity is officially identified on the Borsa Istanbul (BIST) under the ticker AEFES.IS and functions as the primary holding company for the Efes Beverage Group.³ Established in 1969, the Company has evolved from a local Turkish brewer into one of the largest beer production companies globally, currently ranked as the 5th largest in Europe and the 9th largest in the world by production volume.⁵ The legal headquarters is located at Fatih Sultan Mehmet Mahallesi, Balkan Caddesi, Buyaka E Blok No: 58/24, Umraniye, Istanbul, within the Marmara region of Turkey.¹

The primary business activities of Anadolu Efes encompass the manufacturing, bottling, marketing, and distribution of malt and beer, as well as an extensive range of soft drinks through its partnership with the Coca-Cola Company.¹ Its brewing operations span a vast geographic footprint, including Turkey, Russia, Kazakhstan, Georgia, Moldova, and Ukraine.¹ Furthermore, the Company holds a controlling 50.3% stake in Coca-Cola Icecek A.S. (CCI), which manages sparkling and still beverage operations across 11 countries, including Turkey, Pakistan, Central Asia, and the Middle East.⁴ This diversified portfolio places Anadolu Efes within the Consumer Staples sector, specifically classified under the Beverages industry.⁴

The corporate identity of Anadolu Efes is deeply intertwined with its parent organization, AG Anadolu Grubu Holding A.S., which maintains a 43.05% ownership stake.⁶ The shareholder structure is further characterized by a significant strategic alliance with Anheuser-Busch InBev (AB InBev), which holds 24% of the shares via AB InBev Harmony Limited.⁵ The remaining 32.95% of the Company is publicly traded, attracting substantial interest from international institutional investors, who historically hold a high percentage of the free float.⁶ This complex ownership structure facilitates a unique blend of local market expertise and global industry standards, particularly in its ESG (Environmental, Social, and Governance) disclosure practices, which have been refined through decades of international collaboration.⁵

ESG Report Timeline and Disclosure Evolution

(2014–2023)

The sustainability disclosure journey of Anadolu Efes represents a deliberate transition from compliance-oriented reporting to a sophisticated integrated strategic communication model. The Company began publishing formal sustainability reports in 2010, establishing a baseline for transparency that has been maintained for over a decade.⁵ This period between 2014 and 2023 is marked by the adoption of increasingly rigorous international frameworks, the integration of non-financial data into annual financial reporting, and the navigation of significant geopolitical controversies that challenged the Company's operational transparency.

The Standardization Phase (2014–2016)

In 2014, Anadolu Efes published its 2013 Sustainability Report on October 23, 2014, alongside a dedicated Sustainability Reporting Index.¹⁴ This period focused on aligning reporting with the Global Reporting Initiative (GRI) G4 guidelines, which emphasized materiality—the identification of ESG issues most significant to the business and its stakeholders.⁷ The 2014 reporting cycle was particularly noteworthy for the Company's inclusion in the inaugural Borsa Istanbul Sustainability Index, which was launched on November 4, 2014.¹⁵ This recognition served as a regulatory milestone, validating the Company's efforts in water management, energy efficiency, and community development within a domestic context.¹⁵

The 2015 Sustainability Report, released on December 7, 2016, continued the use of GRI G4 guidelines but expanded its scope to include 15 breweries and six malteries across six countries.⁷ A critical development during this year was the formalization of the 2020 Sustainability Goals, which targeted a 17% reduction in energy consumption and emissions and a 30% reduction in water consumption per unit of product compared to 2008 levels.⁷ These goals established a quantitative mechanism for accountability, allowing stakeholders to track year-over-year performance against a fixed baseline.⁷

By 2016, the Company transitioned to the "GRI Standards: Core Option," reflecting the global shift from G4 to the more modular GRI Standards.¹⁷ The 2016 report, published on December 26, 2017, documented a 23% reduction in water consumption and a 14% reduction in CO2 emissions in beer production compared to 2008.¹⁷ During this phase, the Company maintained 100% ISO 22000/HACCP certification for its facilities, underscoring its focus on product safety and quality as a core governance pillar.⁷

Strategic Integration and the Positive Impact Plan (2017–2019)

The 2017 and 2018 reporting periods saw Anadolu Efes deepening its commitment to the United Nations Sustainable Development Goals (SDGs). The 2017 Sustainability Report was published on November 12, 2018, and the 2018 report on July 4, 2019.¹⁴ A major structural change occurred in early 2018 when Anadolu Efes merged its Russian and Ukrainian operations with those of AB InBev, creating the AB InBev Efes B.V. joint venture.⁵ This merger significantly

increased the complexity of the Company's ESG data collection, expanding its reporting universe from six breweries to 14 in the Russia-Ukraine region alone.⁵

In 2019, coinciding with its 50th anniversary, Anadolu Efes launched its "Positive Impact Plan," a comprehensive sustainability strategy centered on the four pillars of Nature, Business, People, and the Value Chain.⁵ The 2019 Sustainability Report, prepared in accordance with GRI Standards, served as the Company's Communication on Progress for the UN Global Compact.⁵ A notable development this year was the Company's participation in the Business World Plastic Initiative in Turkey, aimed at reducing plastic use in the ecosystem.⁵ Despite the strategic maturity, the 2019 report did not obtain independent external assurance for its data, relying instead on internal verification by management.⁵

The Move Toward Net Zero and Integrated Thinking (2020–2021)

The onset of the global pandemic in 2020 served as a catalyst for Anadolu Efes to accelerate its "Integrated Thinking Approach." The 2020 Sustainability Report introduced the "2030 Sustainability Goals," which were significantly more ambitious than previous targets.¹³ The Company committed to reaching net zero carbon emissions across all operations by 2030 and becoming a zero-waste enterprise.¹³ During this year, all beer and malt plants in Turkey were awarded Zero Waste Certificates by the Ministry of Environment, Urbanization, and Climate Change.¹³

In 2021, the Company's disclosure methodology underwent a radical enhancement. The 2021 Sustainability Report began aligning with the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) and the Sustainability Accounting Standards Board (SASB) industry standards.¹⁴ Most importantly, Anadolu Efes engaged Apex Companies, LLC to provide "External Limited Assurance" for its environmental and social metrics, including Scope 1 and 2 GHG emissions, energy consumption, and workforce diversity data.¹⁴ This shift toward third-party auditing marked a critical turning point in the credibility and reliability of the Company's disclosures.¹⁴

Integrated Reporting and Regulatory Alignment (2022–2023)

In 2022, Anadolu Efes published its first "Integrated Report," signaling a move away from standalone sustainability reporting.¹² Integrated reporting (IR) aims to demonstrate the connectivity between a company's financial performance and its ESG impacts, treating them as inseparable components of long-term value creation.¹² This year was overshadowed by the geopolitical conflict in Ukraine, leading the Company to halt production at its Ukrainian facilities.¹

The 2023 Integrated Report, released in 2024, represent the current apex of the Company's disclosure evolution. It was prepared as a roadmap for compliance with the IFRS S1 and S2 standards and the newly enacted Türkiye Sustainability Reporting Standards (TSRS).¹² The 2023

report expanded the scope of independent assurance to include gender pay gap ratios across multiple countries and Scope 3 GHG emissions related to purchased goods and services in Turkey.¹⁴ This level of granularity reflects the Company's preparation for a more regulated ESG environment, where financial materiality and climate resilience are paramount.¹²

Year	Milestone / Development	Disclosure Framework	Assurance Status
2014	Inclusion in BIST Sustainability Index ¹⁵	GRI G4 & Reporting Index	Internal only ¹⁴
2015	Formalization of 2020 Sustainability Goals ⁷	GRI G4 Guidelines	Internal only ¹⁴
2016	Transition to GRI Standards (Core) ¹⁷	GRI Standards: Core	Internal only ¹⁴
2018	Merger of RU/UA ops with AB InBev ⁵	GRI Standards	Not Mentioned ¹⁴
2019	Launch of "Positive Impact Plan" ⁵	GRI Standards; UNGC COP	No external assurance ⁵
2020	Announcement of 2030 Net Zero Goals ¹³	GRI Standards; UNGC	Internal validation ¹³
2021	First year of External Limited Assurance ¹⁴	GRI, SASB, TCFD, UNGC	External (Apex Co.) ¹⁴
2022	Publication of First Integrated Report ¹²	Integrated Reporting (IR)	External Assurance ¹²
2023	Transition to TSRS and IFRS S1/S2 Roadmap ¹⁹	TSRS, IFRS, WEF, GRI, SASB	Extensive External ¹⁴

Environmental Stewardship and Resource Optimization

Environmental performance at Anadolu Efes is managed through a lens of resource dependency and climate resilience. As a brewer, the Company is acutely sensitive to fluctuations in water quality and availability, as well as the stability of agricultural yields.⁵ The "Future of Nature" pillar of its sustainability strategy focuses on four critical areas: water management, climate change, circular packaging, and sustainable agriculture.⁵

Water Management and the CEO Water Mandate

Water is the primary ingredient in the Company's products and the most significant environmental risk to its operations.⁵ Anadolu Efes was the first Turkish company to sign the United Nations Global Compact (UNGC) CEO Water Mandate, a high-level initiative focused on developing solutions to water scarcity and sanitation.⁵ Since joining, the Company has integrated water stewardship into its operational core, focusing on reducing the "water use ratio"—the liters of water required to produce one liter of beer.

Between 2008 and 2016, the Company achieved a 23% reduction in water consumption in its brewing operations.¹⁷ By 2019, operational water efficiency projects had saved approximately 220,000 m^3 of water, equivalent to \$160,000 in operational costs.⁵ In Russia, the Company has a long-term project dedicated to renewing natural water resources, having restored over 80 resources over a nine-year period.⁵ The 2023 Integrated Report further demonstrates this commitment by subjecting water consumption data from Turkey, Georgia, Moldova, and Kazakhstan to independent external assurance, providing a verified metric of its primary resource consumption.¹⁴

Climate Action and Carbon Footprint Reduction

Anadolu Efes has aligned its climate strategy with the Paris Agreement and the goal of limiting global warming to 1.5°C.¹³ The Company's 2030 target of reaching net zero carbon emissions across its entire value chain involves a multi-pronged approach: increasing energy efficiency, transitioning to renewable energy, and engaging suppliers to reduce Scope 3 emissions.¹

In 2016, the Company reported a 15% reduction in energy consumption and a 14% reduction in CO2 emissions compared to the 2008 baseline.¹⁷ During this period, 71% of its facilities were certified under ISO 14001 for environmental management.¹⁷ The Company has consistently participated in the Carbon Disclosure Project (CDP) to report its performance in climate change mitigation.²¹ In 2023, while its CDP Climate Change score remained at a "C" level (Awareness), its Supplier Engagement Rating (SER) reached a "B," indicating strong efforts in managing emissions within the supply chain relative to the beverage industry average.¹⁹ The

2024 Integrated Annual Report notes a 4% reduction in Scope 1 and 2 emissions compared to the previous year, highlighting ongoing progress toward the 2030 net zero target.²⁵

Circular Economy and Packaging Initiatives

Packaging represents a significant portion of the Company's environmental footprint and a major opportunity for circularity. Anadolu Efes aims to be a "zero-waste company" by 2030, a goal supported by a 98% recovery rate for solid waste and by-products achieved as early as 2016.¹³ The Company's strategy involves reducing the weight of glass bottles, increasing the use of recycled materials, and minimizing plastic usage.

In 2019, the Company identified that plastics accounted for only 1.1% of its operational materials, but nonetheless committed to reducing this to 0.5% through partnerships with startups and universities.⁵ All of its Turkish beer and malt plants have attained Zero Waste Certificates, a standard the Company intends to export to its international operations.¹³ These efforts are monitored through the BIST Sustainability Index and other ratings, where packaging management is cited as a key area of successful performance.¹⁵

Sustainable Agriculture and Biodiversity

Sustainability at Anadolu Efes begins in the soil. The Company supports over 8,000 suppliers, many of whom are smallholder farmers providing barley and hops.⁵ Through its "The Future is in Agriculture" program, the Company provides technical support and purchase guarantees to farmers, fostering local development and supply chain security.⁵

In collaboration with WWF-Turkey, the Company implemented the "Smart Agriculture" project to enhance field productivity and quality while reducing the environmental impact of farming.⁵ In Russia, the Company runs research projects to develop new, climate-resilient barley species.⁵ These initiatives not only mitigate risks associated with raw material sourcing but also contribute to the "S" (Social) pillar of ESG by improving the livelihoods of rural communities.⁵

Social Impact and Human Capital Management

The "Social" dimension of the Company's ESG strategy is focused on creating a safe, inclusive, and empowering environment for its 15,318 employees and the communities it serves.¹³ This is managed through the "Positive Impact Plan," which prioritizes occupational health and safety (OHS), diversity, and community development.

Occupational Health and Safety (OHS)

Anadolu Efes maintains a "zero accident" target across all operations.¹⁷ Early in the analysis period, the Company revised its OHS Policy to ensure a standardized approach across Turkey, Russia, and other CIS countries.⁷ Between 2014 and 2015, the Company reported a 27%

reduction in its lost day rate, reflecting the efficacy of its safety training and infrastructure investments.⁷ In 2016, the accident frequency rate was recorded at 2.36, with a continued emphasis on training each employee for an average of 28 hours annually.¹⁷

Diversity, Equity, and Inclusion (DEI)

Gender equality is a high-priority theme for Anadolu Efes, which is a signatory to the UN Women's Empowerment Principles (WEPs).²³ The Company has set targets to increase the representation of women in management roles and has implemented policies to ensure equal opportunity in recruitment and promotion.¹

In a move toward greater transparency, the 2023 Integrated Report included the "Gender Pay Gap Ratio" for its operations in Turkey, Georgia, Moldova, and Kazakhstan within the scope of independent external assurance.¹⁴ This demonstrates a willingness to subject sensitive social data to the same rigor as environmental or financial metrics, providing a benchmark for progress toward true pay equity.¹⁴ Furthermore, the Company's subsidiary, Coca-Cola Icecek, and several partner brands within the Anadolu Group are listed in the "Women-Friendly Companies Stock Index," highlighting a broader corporate culture of gender inclusivity.²³

Community Development and Responsible Consumption

The Company's social footprint extends beyond its employees to broader society through long-standing community projects. "The Future is in Tourism," a flagship initiative, has supported local sustainable tourism projects for decades, creating economic opportunities in underdeveloped regions of Turkey.⁵

As a beverage company, responsible consumption is a critical social responsibility. Anadolu Efes implements "Responsible Consumption and Marketing" campaigns across all country operations, adhering to its Marketing Communication Policy.⁷ The goal is to promote a culture of moderate and responsible enjoyment of its products while strictly adhering to local regulations regarding alcohol sales to minors.⁷

Governance, Ethics, and Risk Management

Governance at Anadolu Efes is structured to ensure accountability, transparency, and ethical conduct. The Company adheres to the Capital Markets Board (CMB) Corporate Governance Principles and is regularly rated for its compliance.¹⁵

Corporate Governance Structure and Articles of Association

The Company's governance is directed by a Board of Directors, which is supported by committees such as the Audit Committee, the Corporate Governance Committee, and the Sustainability Committee.²¹ The Articles of Association define the Company's head office in

Umraniye and establish a registered capital ceiling of TL 10,000,000,000.² Any changes to the corporate structure, such as top management changes or organizational shifts, are promptly disclosed to the public via the BIST platform.²⁸

Ethical Principles and Code of Conduct

The "Anadolu Efes Code of Business Conduct and Ethics" provides the framework for ethical decision-making. It covers critical areas such as anti-bribery and anti-corruption, the protection of personal data, and the prevention of insider trading.²¹ Employees are prohibited from sharing trade secrets or sensitive information on personal social media accounts, and the Company maintains strict "Confidential Information" protocols.³¹ The Company's commitment to ethical governance is reflected in its high Corporate Governance Rating, which was recorded at 9.57 for the parent Anadolu Group in 2023.²⁹

Risk Management and Geopolitical Resilience

The Company's risk management system is designed to identify and mitigate financial, operational, and sustainability-related risks. The 2022–2023 period was a stress test for this system due to the Russia-Ukraine conflict. Anadolu Efes suspended production in Ukraine for safety reasons and had to navigate complex changes in its Russian operations.¹

In late 2024, a Russian decree transferred the operations of the AB InBev Efes joint venture in Russia to temporary external management.⁸ S&P Global Ratings subsequently downgraded the Company's credit rating to 'BB' from 'BB+', citing the loss of effective control over approximately \$500 million in cash balances held in Russia.⁸ Despite these challenges, the Company continues to pass sovereign stress tests in Turkey and is actively working on cost efficiencies and working capital management to reduce leverage.⁸

External Ratings and Third-Party Assessments

External assessments provide an objective perspective on the Company's ESG performance. Anadolu Efes is covered by several major rating agencies and is a constituent of several sustainability-themed indices.

MSCI ESG Ratings

MSCI ESG Ratings evaluate companies' resilience to long-term ESG risks on an industry-relative scale from AAA to CCC.³² As of 2023, Anadolu Efes maintained an **"A" rating** from MSCI, which places it above the industry average for beverage companies.¹⁹ This rating reflects the Company's mature ESG management systems, though it suggests there is further progress to be made to reach the "Leader" (AA-AAA) class.³²

S&P Global Corporate Sustainability Assessment (CSA)

The S&P Global ESG Score measures a company's management of material ESG risks and impacts.⁹ Anadolu Efes has seen a positive trend in its S&P scores. In 2023, the Company's score was recorded as 45, which increased to **54** in the assessment updated on November 24, 2025.⁹ This score is based on the Company's participation in the CSA survey and a Media and Stakeholder Analysis (MSA) that monitors ongoing controversies.⁹

Borsa Istanbul (BIST) Sustainability Indices

Anadolu Efes has been included in the **BIST Sustainability Index (XUSRD)** since its launch in 2014.¹⁵ Inclusion requires meeting specific score thresholds for each ESG pillar (40 or more) and an overall score of 50 or more.¹⁶ With the launch of the **BIST Sustainability 25 Index** in 2022—an index for large, liquid companies with even higher ESG performance—Anadolu Efes has maintained its visibility as a top Turkish performer.¹⁶

CDP (Carbon Disclosure Project) Performance

CDP evaluates environmental transparency and action on climate change and water security.³⁵ The Company's scores for the 2021–2023 period indicate an "Awareness" (C) to "Management" (B) level of performance:

Year	Program	Status	Score
2023	Climate Change	Submitted	C ²⁴
2023	Water Security	Submitted	C ²⁴
2022	Climate Change	Submitted	C ²⁴
2022	Water Security	Submitted	C ²⁴
2021	Climate Change	Submitted	B ²⁴

Note that while the Company's scores were at the "C" level in 2023, its subsidiary Coca-Cola Icecek achieved "A-" scores for both Climate Change and Water Security in 2021 and maintained high performance throughout the period.²³

Reference Table and Source Credibility Assessment

The analysis presented in this report is supported by a range of primary and secondary sources. Each source is evaluated for credibility based on its authority, transparency, and

recency.

#	Reference (APA 7th edition format)	Source Type	Credibility Score (0–10)	Justification for Score	Relevance to Query

Transparency and Knowledge Limitations

This report is based on information available as of January 2026.¹ While the research materials provided are exhaustive for the 2014–2023 period, certain limitations exist regarding real-time updates and paywalled data.

Knowledge Cutoff and Data Availability

The most recent comprehensive data set comes from the 2023 Integrated Report and the 2024 Sustainability Report in compliance with TSRS, which covers activities through December 31, 2024.¹² Performance metrics for the 2025 fiscal year will not be fully disclosed until the publication of the 2025 Integrated Annual Report, typically expected in the second quarter of 2026.¹⁴

Verified vs. Unverified Information

Information regarding the legal name, headquarters, primary activity, and historical ESG report publications is **verified** through official company filings and exchange disclosures.¹ Information regarding specific 2025 ESG ratings from S&P Global is verified as of November 24, 2025.⁹

Claims regarding the final resolution of the "temporary external management" of Russian assets remain **unverified** and subject to ongoing geopolitical and legal outcomes.⁸ While Anadolu Efes remains the legal owner, its ability to exercise control over these assets for ESG reporting

purposes (e.g., Scope 1-3 data from Russia) may be limited in future reports.⁸

Recommendations for Further Verification

To independently verify the facts and monitor the Company's ongoing ESG performance, users are recommended to visit the following authoritative databases:

1. **Public Disclosure Platform (KAP):** The official portal for Borsa Istanbul (BIST) announcements where all Material Event Disclosures for AEFES.IS are filed in real-time.
2. **Anadolu Efes Investor Relations Page:** The central repository for all Annual Reports, Integrated Reports, and Sustainability Reports from 2010 to the present.
3. **CDP Search Tool:** A global database where the Company's full annual climate and water questionnaires can be viewed for a fee or with a license.

Strategic Synthesis and Conclusion

The longitudinal analysis of Anadolu Efes' ESG disclosures from 2014 to 2023 demonstrates a company that has moved beyond mere compliance into a state of strategic sustainability integration. By transitioning from GRI-based standalone reports to the Integrated Reporting (IR) framework and now toward the Türkiye Sustainability Reporting Standards (TSRS), the Company has aligned itself with the highest international transparency standards.¹²

The Company's environmental strategy is sophisticated, utilizing global initiatives like the CEO Water Mandate to manage its most material resource risks.⁵ Its climate commitments, culminating in a 2030 net zero target, are supported by a verifiable track record of emissions and energy reductions, increasingly validated by third-party assurance.¹³ On the social front, its focus on agricultural sustainability and gender equality—validated by gender pay gap assurance—sets it apart from many of its regional peers.⁵

However, the period ends with a significant governance challenge. The geopolitical landscape has introduced unmanageable risks to its Russian and Ukrainian operations, affecting its credit rating and potentially its future ESG data integrity.⁶ The "Governance" pillar will be the primary area of interest for stakeholders in the coming years as the Company navigates this transition. In conclusion, Anadolu Efes remains a leader in Turkish ESG disclosure, possessing a robust framework that is likely to withstand current macro-pressures, provided it maintains its commitment to transparency and integrated strategic thinking.
