

Strategic ESG Analysis and Sustainability Disclosure Report: Şok Marketler Ticaret A.Ş. (SOKM.IS)

Company Identification and Institutional Profile

The institutional identity of the entity analyzed herein is established as Şok Marketler Ticaret Anonim Şirketi, widely recognized in commercial and financial sectors as Şok Marketler.¹ Founded originally in 1995 and subsequently undergoing significant structural transformations, the company is a cornerstone of the Turkish discount retail market.¹ The organization is formally headquartered at Kısıklı Mahallesi Hanımseti Sokak No: 35, B/1 Üsküdar, İstanbul, Türkiye.³ Within the context of global capital markets, the company is identified by the stock ticker SOKM.IS on the Istanbul Stock Exchange (Borsa İstanbul), where it has been a constituent of the BIST 100 and other major indices since its Initial Public Offering in May 2018.¹

The primary business activity of Şok Marketler involves the retail trade of fast-moving consumer goods (FMCG), operating through an extensive network of discount supermarket stores.¹ The company employs a "one-stop shop" strategy, designed to meet the holistic shopping needs of consumers by providing a range of products including dairy, produce, personal care, cleaning supplies, and textiles.¹ This business model is heavily predicated on an "Everyday Low Price" strategy, which integrates high-volume procurement and efficient logistics to maintain competitive pricing.⁶ The organization's scale is a defining characteristic, with operations spanning all 81 provinces of Türkiye through approximately 10,981 stores and 51 distribution centers as of the end of the 2023 fiscal year.¹

Classification of the entity within the financial industry varies slightly by provider but consistently places it within the consumer-facing retail segment. Morningstar and Bloomberg classify Şok Marketler under the Consumer Cyclical or Consumer Discretionary sector, specifically within the Department Stores and Food Retail industries.¹ The company is a key subsidiary of Yıldız Holding, one of Türkiye's largest conglomerates, which acquired the retail chain in 2011 and subsequently integrated it with other retail assets such as DiaSA and OnurEx to form the current operational behemoth.¹ The following table summarizes the core identifying data for the entity.

Identity Parameter	Verified Detail

Registered Legal Name	Şok Marketler Ticaret A.Ş.
Primary Ticker Symbol	SOKM.IS (Borsa İstanbul)
Principal Business Activity	FMCG Discount Retail
Global Headquarters	Üsküdar, İstanbul, Türkiye
Major Parent Entity	Yildiz Holding
Primary Sector	Consumer Discretionary / Consumer Cyclical
Primary Industry	Food Retail / Department Stores
ISIN	TRESOKM00022

Verification of this identification is derived from multiple high-credibility sources, including official Borsa İstanbul (BIST) disclosures, the company’s dedicated Investor Relations portal, and global financial data providers such as Reuters and Morningstar.¹ There is no ambiguity regarding the ticker SOKM.IS, as it uniquely identifies this specific retail entity within the Turkish equity market.

ESG Reporting Evolution and Timeline Analysis (2014–2023)

The decade spanning 2014 to 2023 represents a transition from centralized conglomerate reporting under Yıldız Holding to a sophisticated, independent, and framework-aligned sustainability disclosure regime at Şok Marketler. This evolution reflects both the internal maturity of the organization and the tightening of ESG disclosure requirements within the

Turkish capital markets and global investment standards.

The Pre-Listing Phase (2014–2017)

During the early part of this period (2014–2016), Şok Marketler did not issue standalone sustainability reports. As a subsidiary of Yildiz Holding, its environmental and social performance was largely integrated into the broader sustainability communications of the parent group or confined to standard regulatory filings required by the Turkish Commercial Code.² This phase was characterized by operational consolidation, as the company integrated the DiaSA and OnurEx acquisitions and expanded its store count from a few thousand to over 4,000.⁹

The seminal year for independent ESG disclosure was 2017. Şok Marketler published its inaugural sustainability report for this period, marking the first time the company articulated its specific sustainability strategy, "This is Our World," to the public.² This first report focused on identifying the company's environmental footprint and its role as a major employer in Türkiye. While it established a baseline for energy and water consumption, it was primarily a foundational document that preceded the more rigorous requirements of its future public status.

IPO and Institutional Transparency (2018–2020)

The Initial Public Offering on May 18, 2018, served as a fundamental catalyst for transparency.¹ As a public company, Şok Marketler became subject to the Capital Markets Board (CMB) of Türkiye's regulations, including the newly introduced "Sustainability Principles Compliance Framework".¹¹ The 2018 Sustainability Report, published in mid-2019, demonstrated a commitment to annual disclosure and began to align with the Global Reporting Initiative (GRI) Standards, although not yet at a fully assured level.¹⁰

By 2019 and 2020, the reporting framework matured significantly. The 2019 report, released in July 2020, formally adopted the GRI Standards, providing structured data on emissions, labor practices, and governance.¹⁰ This period also saw the emergence of the "Cepte ŞOK" digital platform as a focus area for "Business Model Innovation," which the company categorized as part of its social contribution to consumer access during the COVID-19 pandemic.⁷ The company also began participating in the BIST Sustainability Index evaluation, which uses LSEG/Refinitiv data to score companies on their ESG performance.³

Framework Sophistication and Verification (2021–2023)

The most recent phase of the timeline is defined by the adoption of multi-framework reporting and third-party verification. In 2021, Şok Marketler expanded its disclosures to include the Sustainability Accounting Standards Board (SASB) sectoral guidelines, specifically targeting the Food Retail and Distribution industry standards.² This shift indicated a move toward providing

financially material ESG data tailored to institutional investors.

The 2023 Sustainability Report, published in 2024, represents the current pinnacle of the company's disclosure efforts. This report was prepared in accordance with the GRI Standards 2021 version and SASB sectoral guidelines.² A critical milestone in 2023 was the procurement of independent limited assurance for selected environmental and social indicators, including Scope 1 and 2 greenhouse gas emissions, water consumption, waste volumes, and employee demographics, conducted by PwC.² Furthermore, the company initiated mapping its activities to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) and the UN Sustainable Development Goals (SDGs).²

Reporting Milestone Year	Development	Framework/Standard	Source
2017	First Sustainability Report	Internal Framework	²
2018	IPO on Borsa İstanbul	CMB Compliance	¹
2019	Adoption of GRI Standards	GRI Core	²
2020	BIST Sustainability Index inclusion	BIST/LSEG Criteria	³
2021	Adoption of SASB standards	SASB Food Retail	²
2022	First Scope 1 & 2 Emission Disclosure	GHG Protocol	²
2023	Independent Assurance by PwC	ISAE 3000	²
2023	TCFD Alignment and SDG Mapping	TCFD/UN SDG	²

Environmental Management and Climate Strategy

The environmental performance of Şok Marketler is a critical component of its "Working for the Future of Environment" focus area. Given the scale of its operations, the company's primary environmental impacts are related to energy consumption in retail stores, logistical emissions, and waste management across the supply chain.

Energy Efficiency and Operational Emissions

The "Store Energy Efficiency Project" serves as the primary mechanism for reducing the company's carbon footprint. In a retail network comprising nearly 11,000 stores, refrigeration and lighting constitute the majority of electricity demand. In 2023, the company reported saving 30,677 MWh of energy through the automation of high-usage systems and the replacement of older refrigeration cabinets with energy-efficient models.² This project is not merely an environmental endeavor but a core operational strategy to manage rising energy costs in the Turkish economy.

Quantification of greenhouse gas (GHG) emissions has become a central part of the company's disclosure. In 2024, the organization publicly disclosed that its total operational GHG emissions for the 2023 fiscal year amounted to 293,550 metric tons of CO_2 equivalent.¹⁴ This figure includes Scope 1 (direct emissions from owned sources like logistics vehicles and backup generators) and Scope 2 (indirect emissions from purchased electricity).² A nuanced analysis of the data shows that while the company has made progress in energy efficiency per store, its total Scope 1 emissions have increased due to the expansion of its logistical fleet and store network.¹⁴ The 2023 report also achieved a significant transparency milestone by including independent assurance for these emission figures, verified by PwC.²

Circular Economy and the Zero Waste Initiative

Waste management at Şok Marketler is governed by a strategy focused on source reduction and recycling. The company has been a prominent participant in the national "Zero Waste" project led by the Turkish government. By the conclusion of 2023, the company had invested TL 930,000 in zero waste infrastructure for its stores and warehouses, resulting in the attainment of the Zero Waste Certificate for 10,254 locations across all 81 provinces.² Total environmental expenditures for the 2023 period reached TL 335.2 million.²

In terms of specific waste streams, the company utilizes reusable plastic crates for the transportation of fresh produce, which significantly reduces the reliance on single-use cardboard and plastic packaging.² This "Circular Economy" approach is designed to minimize the impact of packaging waste, which is a material issue identified under the SASB guidelines. The company also tracks water consumption as a material issue, despite retail not being a water-intensive industry, to ensure responsible management in water-stressed regions of

Türkiye.²

Sustainable Agriculture and Supply Chain

Recognizing that a significant portion of its environmental and social impact lies within its supply chain, Şok Marketler operates the "Fair Agriculture from Farm to Table" project. This initiative, launched in 2020, involves direct collaboration with farmers to promote sustainable agricultural practices.² In 2023, the project provided 40 hours of training to 150 farmers on subjects such as disease control, environmental protection, and the controlled use of pesticides.² By facilitating more sustainable farming, the company aims to secure its long-term supply of fresh produce while mitigating the environmental degradation associated with industrial agriculture.

Environmental Metric (2023)	Performance Value	Verified Source
Energy Savings from Store Projects	30,677 MWh	²
Total Environmental Expenditures	TL 335.2 Million	²
Total Operational GHG Emissions (CO_2e)	293,550 Metric Tons	¹⁴
Scope 1 Emissions	23,186 t CO_2e	¹⁴
Scope 2 Emissions	270,364 t CO_2e	¹⁴
Zero Waste Certified Stores/Warehouses	10,254	²

Social Capital and Human Resource Management

As one of the largest employers in Türkiye, Şok Marketler's social performance is intrinsically linked to its management of human capital and its engagement with the communities in which it operates. The "Growing Stronger with Our Stakeholders" pillar addresses these critical social issues.

Diversity, Equity, and Inclusion (DEI)

Şok Marketler maintains a strong focus on gender equality within its workforce. In 2023, female employees constituted approximately 54% to 55% of the total staff.² The company was recognized as an "Equality Pioneer," ranking third in its industry for providing opportunities for women to rise to management positions.² This commitment is formalized through the company's Ethics and Human Resources policies, which prohibit discrimination based on gender, race, religion, or marital status.¹⁶

The organization also reports on its commitment to employing persons with disabilities, who represent 3% of the total workforce as of late 2023.² These demographic metrics are part of the "Selected Information" that receives independent limited assurance from PwC, ensuring that the company's claims regarding workforce diversity are verifiable.²

Training and Occupational Health and Safety (OHS)

Talent development is a material issue for a company with over 51,000 employees. In 2023, Şok Marketler increased its total training hours by 14% compared to the previous year.² For white-collar employees, the company reported a satisfaction rate of 83% and an engagement rate of 88%.² This investment in human capital is designed to improve operational efficiency and reduce turnover in a high-growth retail environment.

Occupational Health and Safety (OHS) is managed through a comprehensive Integrated Management System.¹¹ The company monitors and reports on accident frequency rates and lost days due to injury, with these indicators also included in the scope of the 2023 independent assurance report.² This level of transparency regarding safety performance is critical for maintaining labor relations and mitigating potential legal and reputational risks.

Community Impact and Earthquake Response

The company's social responsibility extends to the "Count Me In" (ŞOK'ta Ben de Varım) project. Launched and expanded in 2023, this project provides a marketplace for handcrafted products from women's cooperatives, particularly those located in regions affected by the devastating earthquakes of February 2023.⁷ By integrating these products into its national retail network, Şok Marketler provides a critical economic lifeline to women entrepreneurs and supports local economic recovery.²

Furthermore, the company participated in a Supply Chain Financing Program in partnership with the European Bank for Reconstruction and Development (EBRD) and Akbank.⁷ This program was specifically designed to support suppliers in the earthquake-affected areas, demonstrating a strategic integration of social commitment and supply chain resilience.

Social Indicator (2023)	Performance Value	Verified Source
Total Employee Count	~51,000	5
Female Workforce Share	54% - 55%	2
Training Hour YoY Increase	14%	2
White-Collar Engagement Rate	88%	2
Disabled Employee Proportion	3%	2

Governance Structure and Business Ethics

The governance framework at Şok Marketler is designed to ensure that sustainability and ethical conduct are integrated into the highest levels of corporate decision-making. Since its IPO, the organization has consistently aligned its governance with the "Sustainability Principles Compliance Framework" issued by the Capital Markets Board.¹¹

Sustainability Governance and Oversight

The Sustainability Committee is the central body responsible for directing the ESG strategy. Chaired by the CEO, the committee includes senior executives from across the business, including the CFO, Human Resources, and Trade departments.² This structure ensures that sustainability goals are not siloed but are integrated with financial planning and operational execution. The committee reports its findings and progress to the Board of Directors, which maintains final oversight of the company's sustainability performance.¹¹

The company also maintains an Ethics Committee and a set of formal Ethical Principles that govern interactions with all stakeholders.¹⁶ These principles include a zero-tolerance policy for bribery and corruption, as well as guidelines for transparent and timely communication with public institutions.¹⁶ The organization also has a "Mobbing Policy" to prevent psychological harassment in the workplace, which is a notable advancement in the context of Turkish labor governance.¹⁶

Material Controversies and Regulatory Risks

The governance pillar has not been without challenges. The most significant regulatory milestones for Şok Marketler involve investigations by the Turkish Competition Board (TCB). In

late 2021 and 2022, the TCB concluded investigations into the fast-moving consumer goods sector, alleging that major retailers, including Şok Marketler, had engaged in a "hub-and-spoke" cartel. This involved the indirect exchange of price-sensitive information through shared suppliers to fix retail prices.¹⁷ The Board imposed substantial administrative fines on the sector, although the retailers were not fined twice for related infringements that had already been penalized in previous investigations.¹⁷

In July 2023, the TCB concluded another major investigation into "no-poach" agreements in labor markets. While 16 undertakings across various sectors were fined for agreeing not to hire each other's employees, the specific involvement and potential penalties for Şok Marketler were monitored as a governance and social risk.¹⁹ These events highlight "Competitive Behavior" as a material governance issue for the company, as analyzed under frameworks like SASB.

Corporate Ratings and Index Inclusions

Şok Marketler's ESG performance is externally validated through its inclusion in several major market indices. The company is a constituent of the BIST Sustainability Index (XUSRD), which requires meeting specific ESG scoring criteria provided by the London Stock Exchange Group (LSEG) / Refinitiv.³ To be included, companies must demonstrate satisfactory ESG performance and transparency in reporting.¹²

The organization also receives corporate credit ratings that incorporate ESG factors. In November 2023, JCR Eurasia Rating assigned Şok Marketler a Long-Term National Issuer Credit Rating of 'AA+ (tr)' with a 'Stable' outlook.²¹ The rating cited the company's robust cash flow, absence of financial indebtedness (excluding IFRS-16 liabilities), and established brand recognition as key strengths, while noting the impact of personnel costs and price fluctuations as potential pressures on profitability.²¹

Governance Metric/Event	Detail/Rating	Date	Source
Long-Term National Rating	AA+ (tr) / Stable	Nov 2023	21
BIST Sustainability Index	Constituent	2018 - 2023	3
Competition Board Investigation	Cartel Allegations	2021 - 2022	17

Labor Market Investigation	No-Poach Allegations	2023	19
Board Level Oversight	Sustainability Committee chaired by CEO	Current	2

Quantitative Performance Summary and Financial Context

The following table provides a comparative overview of key performance indicators (KPIs) for Şok Marketler from 2021 to 2023. These figures demonstrate the company's trajectory in operational growth, energy efficiency, and social demographics.

Indicator	2021	2022	2023	Source
Store Count	9,247	10,281	10,725*	7
Total Employees	~35,000+	~45,000+	51,212	5
Female Employee %	~50%	54%	55%	2
Revenue (TL Billion)	28.4	59.3	133.0	22
Gross Margin (%)	23.39%	23.77%	19.68%	22
GHG Emissions (t <i>CO₂e</i>)	Not Reported	~300,000+	293,550	14
Zero Waste Certification	Developing	Initial	10,254 sites	2

*Note: Final 2023 year-end figures from annual reports may show slight variations based on the

timing of store openings/closings in the final quarter..⁷

The financial data indicates a period of hyper-growth in nominal terms, primarily driven by high inflation in Türkiye (leading to increased basket sizes) and the rapid expansion of the store network.¹ However, this growth has coincided with margin compression in 2023, partly due to rising personnel costs and the impact of inflation accounting (IAS-29).²¹ From an ESG perspective, the challenge is to maintain growth while decoupling it from increased carbon emissions and ensuring fair labor practices in a high-inflation environment.

Reference Table and Credibility Assessment

The research findings presented in this report are supported by a rigorous selection of primary and secondary sources. Each source has been evaluated for credibility based on its authority, transparency, and independence.

Transparency, Limitations, and Recommendations

This report is based on the most comprehensive data available as of the knowledge cutoff date of March 20, 2026. However, certain limitations in the analysis should be noted to ensure an accurate interpretation of the findings.

Limitations in Data and Access

- Historical ESG Data Gaps:** For the years 2014 to 2016, there is no standalone sustainability reporting for Şok Marketler. Performance data for this period is largely unverified or integrated into parent-level reports which do not provide store-level granularity.²
- Scope 3 Emissions Granularity:** While the company has begun disclosing Scope 3 emissions (specifically Category 6: Business Travel), it has not yet provided a full category-level breakdown of Scope 3 emissions across its entire value chain, such as purchased goods and services.² This limits visibility into the organization’s total upstream and downstream climate impact.
- Real-Time Data Lag:** Non-financial reporting (Sustainability Reports) is typically published several months after the fiscal year end. Consequently, the 2023 Sustainability Report was the most recent comprehensive source available at the time of drafting, with early 2024 and 2025 data being limited to interim financial reports and brief announcements.¹⁰
- Proprietary ESG Scores:** Specific historical letter grades from private agencies like MSCI or Sustainalytics were not fully detailed in the provided research material for each year. While the BIST Sustainability Index status is verified, the underlying numerical scores for each specific year are often behind institutional paywalls.²

Unverified Claims

Claims regarding the "long-term positive impact" of the company’s agricultural training on

regional biodiversity are considered "Unverified" as they are based on internal goals and have not yet been subjected to independent ecological impact assessments beyond the training participant counts.²

Recommendations for Further Verification

To independently verify and update the information contained in this report, users are encouraged to monitor the following authoritative sources:

1. **Public Disclosure Platform (KAP):** The primary portal for all material event disclosures and financial/non-financial reports for Turkish listed companies (<https://www.kap.org.tr>).
2. **Şok Marketler Investor Relations:** For the most recent annual and sustainability reports, including future TSRS-aligned disclosures (<https://sokmarketyatirimciiliskileri.com/en/>).
3. **CDP Public Responses:** To review the full qualitative and quantitative details of the company's annual climate and water security disclosures (<https://www.cdp.net/en/responses>).

Concluding Analysis

The ESG profile of Şok Marketler Ticaret A.Ş. has undergone a remarkable evolution from 2014 to 2023, transforming from a non-disclosing private subsidiary into a highly transparent, multi-framework-aligned public organization. The company's reporting journey is characterized by a proactive adoption of GRI and SASB standards, culminating in the procurement of third-party assurance from PwC for its 2023 disclosures.²

From an environmental standpoint, the organization's scale presents both a significant challenge and a massive opportunity for impact. The Store Energy Efficiency Project and the Zero Waste certification of over 10,000 locations are clear indicators of operational commitment to reducing environmental externalities.² However, the rising trend in Scope 1 emissions highlights the inherent tension between rapid store expansion and carbon reduction goals.¹⁴

Socially, Şok Marketler stands out for its leadership in gender equality and its rapid response to national crises, such as the 2023 earthquake, through innovative supply chain financing and community support projects.² Governance, while structurally robust with CEO-level committee leadership, remains exposed to regulatory risks, particularly in the competitive behavior and labor agreement domains, as evidenced by ongoing investigations from the Turkish Competition Board.¹⁷

As the company moves into a new regulatory era with the introduction of the Turkish Sustainability Reporting Standards (TSRS), its established foundation of transparent, verified disclosure positions it well to meet the increasing demands of the global investment community. The primary strategic imperative for the 2024-2030 period will be the successful decoupling of revenue growth from environmental impact and the maintenance of ethical

market behavior across its vast supply chain.
