

Comprehensive Analysis of ESG Disclosure and Corporate Sustainability at TAV Havalimanları Holding A.Ş.

Company Identification and Strategic Operational Profile

TAV Havalimanları Holding A.Ş., referred to globally as TAV Airports, stands as a premier entity in the transport infrastructure sector, specializing in the multifaceted management and operation of international airports.¹ The company's legal identity is established as TAV Havalimanları Holding A.Ş., a status it has maintained since its founding in 1997, although it underwent a name change from Tepe Akfen Vie Yatirim Yapim ve Isletme A.S. in August 2006 to better reflect its growing focus on integrated airport services.² Headquartered in Istanbul, Turkey, specifically at Vadistanbul Bulvar, Ayazaga Mahallesi, Azerbaijan Caddesi, 2C Blok No:3L/6, 34485 Sarıyer, the organization acts as a central hub for operations spanning three continents and eight countries.¹

The primary business activity of TAV Airports is the management of terminal buildings and the provision of associated airport services, a role that encompasses 15 airports in countries including Turkey, Kazakhstan, Georgia, North Macedonia, Latvia, Tunisia, Saudi Arabia, and Croatia.³ This operational model is distinguished by its high level of vertical integration.⁴ The company operates through several distinct segments: Terminal Operations, Catering Operations (BTA), Duty-Free Operations (ATÜ), Ground Handling and Bus Operations (Havaş), and other support segments including IT (TAV Technologies), security (TAV Security), and lounge services (TAV Operation Services).³ This structure allows TAV Airports to capture value across the entire passenger journey while maintaining direct control over the Environmental, Social, and Governance (ESG) variables inherent in each service line.⁸

The sector and industry classification for the company, as confirmed by Bloomberg, Reuters, and the Borsa Istanbul, place it within the Industrials sector and the Transportation Infrastructure industry, specifically the Airlines, Airports & Air Services sub-industry.² TAV Airports is a significant constituent of the Borsa Istanbul, included in indices such as the BIST 100, BIST 30, BIST Corporate Governance, and notably, the BIST Sustainability and BIST Sustainability 25 indices.¹ Identification of these details is verified through primary exchange listings and the company's official Investor Relations portal.¹

The shareholding structure reveals a strategic partnership with Groupe ADP (Aéroports de Paris), which holds a 46.12% stake in the company.⁴ This relationship is not merely financial but functional, as it aligns TAV Airports with a global network of 28 airports, facilitating the transfer

of best practices in operational efficiency and sustainability reporting.⁴ Other significant shareholders include Tepe Insaat Sanayi A.S. (5.06%) and Sera Yapi Endustrisi ve Ticaret A.S. (1.16%), with a free float of 47.66%.⁴ This diverse ownership base, comprising both local industrial conglomerates and a major international airport operator, necessitates a high standard of transparency and sophisticated ESG disclosure to satisfy both local regulatory requirements and international investor expectations.⁴

Industry	Transportation Infrastructure / Airport Services	2
Main Ticker	TAVHL.IS (Borsa Istanbul)	1
Key Subsidiary Segments	Havaş, ATÜ, BTA, TAV Technologies, TAV Security	3

Historical Maturation of ESG Disclosure (2014–2023)

The decade from 2014 to 2023 marks the period in which TAV Airports transitioned from a voluntary disclosure model based on corporate social responsibility to a rigorous, financialized ESG framework.⁸ The company has historically been a leader in the Turkish market regarding sustainability reporting, having published its first sustainability report for the 2009–2010 period in accordance with Global Reporting Initiative (GRI) G3.1 guidelines.¹⁵ By 2014, the organization had matured sufficiently to become one of the inaugural constituents of the BIST Sustainability Index, a position it has maintained consistently.¹⁶

Early Standardization and Framework Adoption (2014–2016)

In 2014, the organization's ESG efforts were characterized by a focus on transparency and the adoption of the GRI G4 guidelines.¹⁸ During this year, TAV Airports was recognized as the first company in Turkey to report to the Carbon Disclosure Project (CDP) Water Program, signaling a strategic interest in resource management that extended beyond basic carbon tracking.¹⁶ The 2014-2015 reporting cycle saw the company move toward the GRI G4 "Core" option, which demanded a more rigorous materiality assessment—identifying issues most relevant to both the business and its stakeholders.¹⁸

A significant environmental milestone occurred in 2015 when Ankara Esenboğa Airport achieved carbon-neutral status (Level 3+) under the Airport Carbon Accreditation (ACA) program.¹⁸ This was the first such recognition for an airport in Turkey and served as a proof-of-concept for the company's ability to implement high-level environmental standards.¹⁸ Furthermore, the organization increased its CDP Climate Change disclosure score to 89 by 2016, reflecting improved data collection and reduction performance across its Istanbul, Ankara, and Izmir operations.¹⁶

Integration and Geographic Expansion (2017–2020)

Following the acquisition of a controlling stake by Groupe ADP in 2017, TAV Airports began aligning its ESG strategies with broader European standards.⁴ This era was marked by the publication of biennial sustainability reports (e.g., 2016-2017) and an increased focus on geographic diversification.¹² The reporting boundaries expanded to include international operations more comprehensively, such as those in Georgia and Tunisia.¹¹

In 2020, despite the unprecedented crisis brought by the COVID-19 pandemic, TAV Airports renewed its commitment to sustainability by signing the "Airports for Trust" charter along with other members of the Groupe ADP network.²¹ This commitment formalized the company's ambition to reach carbon neutrality by 2030 and net-zero emissions by 2050.¹⁹ The pandemic also shifted the "S" (Social) pillar toward health and safety, leading the company to join the Airports Council International (ACI) Airport Health Accreditation program for 11 of its airports.²³

Regulatory Compliance and Modern Frameworks (2021–2023)

The most recent phase of the timeline (2021-2023) is defined by the move toward mandatory disclosure and the adoption of next-generation reporting frameworks.⁸ In 2021, the Turkish Capital Markets Board (CMB) introduced the "Sustainability Principles Compliance Framework," which required BIST-listed companies to disclose their compliance with ESG principles in their annual reports.²⁴ TAV Airports successfully integrated these requirements into its 2021 and 2022 annual reports, providing detailed tables on its environmental management systems, employee rights, and corporate governance practices.

By 2023, the organization reached a corporate governance rating of 9.69 out of 10, as assessed by SAHA Rating.²⁶ This period also saw the organization preparing for the adoption of the Türkiye Sustainability Reporting Standards (TSRS), which are based on the IFRS S1 and S2 standards.⁸ The company's inaugural TSRS-aligned sustainability report, prepared for the 2024 reporting year, incorporates Task Force on Climate-related Financial Disclosures (TCFD) and Sustainability Accounting Standards Board (SASB) standards, specifically for the Professional & Commercial Services sector.⁸

Reporting Year	Milestone / Development	Framework Used	Source
2014	Entry into BIST Sustainability Index (Initial 15)	GRI G4 (Early Adopter)	16
2015	Esenboğa Airport Level 3+ ACA Status	ACI ACA Program	18
2016	CDP Carbon Disclosure Score reaches 89	CDP Climate Change	16
2017	Controlling Stake Acquisition by Groupe ADP	Strategic Alignment	11
2020	"Airports for Trust" Charter Signing	Group Strategy	21
2021	CMB Sustainability Principles Compliance	CMB Framework	6
2022	Enfidha-Hammamet Level 4 ACA Achievement	ACI ACA Level 4	19
2023	SAHA Corporate Governance Rating	SAHA Methodology	26

	of 9.69		
2024	Publication of First TSRS-Aligned Report	IFRS S1/S2 (TSRS)	⁸

Environmental Stewardship and Decarbonization Pathways

The environmental strategy of TAV Airports is a cornerstone of its "Airports for Tomorrow" vision, focusing on the mitigation of climate change, the conservation of resources, and the protection of biodiversity.²¹ The company acknowledges that aviation is a hard-to-abate sector and therefore focuses its efforts on terminal operations (Scope 1 and 2) while actively influencing its value chain (Scope 3).⁸

Climate Change and the Carbon Neutrality Roadmap

The organization has committed to a phased decarbonization pathway, aiming for carbon neutrality by 2030 and absolute net-zero emissions by 2050.¹⁹ This strategy is managed through the Airport Carbon Accreditation (ACA) program, which provides a verified framework for monitoring and reducing greenhouse gas (GHG) emissions.¹⁹ The progress across the TAV portfolio is illustrative of this commitment:

- **Carbon Neutral Airports:** Antalya, Izmir Adnan Menderes, and Ankara Esenboğa airports have all achieved Level 3+ "Carbon Neutral" status, which involves identifying and reducing Scope 1 and 2 emissions and offsetting residual emissions.¹⁹
- **Transformation to Level 4:** Enfidha-Hammamet Airport in Tunisia reached Level 4 "Transformation" in 2022, which requires the airport to define a long-term strategy for absolute emissions reduction and to engage in stakeholder partnership for Scope 3 management.¹⁹
- **Future Targets:** The organization aims for 11 of its airports to be included in the ACA program by 2025.¹⁹ By 2030, the goal is for the majority of these to move to Level 4, with ultimate Level 5 (Net Zero) accreditation targeted for 2050.²⁹

To support these goals, TAV Airports has initiated significant investments in renewable energy. A flagship project involves the implementation of solar panel farms at Esenboğa, Adnan Menderes, and Milas-Bodrum airports by 2025.²⁹ This investment, totaling approximately USD 20 million, is expected to shift 27.3 MWh of annual electricity consumption to green resources, reducing annual CO₂e emissions by 7,350 tons.²⁹

Resource Efficiency: Energy, Water, and Waste

Effective resource management is integrated into the daily operations of TAV Airports' subsidiaries.⁸ Energy management is guided by ISO 50001 standards, while greenhouse gas accounting follows ISO 14064.²⁹ The company is also adopting AI-supported building management systems to optimize energy use in its terminals.²⁹

Water security is particularly vital for TAV's Mediterranean hubs. The organization monitors the amount of water withdrawn, recycled, and discharged, and it has implemented digitized water management projects, such as the one at Milas-Bodrum Airport, to optimize water and wastewater systems.²⁴ In terms of waste management, the company is targeting "Zero Waste" certification by 2025, focusing on reducing single-use items and increasing recycling rates within its catering and duty-free segments.²⁹

Environmental Indicator	Target / Achievement	Timeline	Source
Carbon Neutrality	Portfolio-wide neutrality within Scope 1 & 2	By 2030	19
Net Zero Emissions	Absolute zero emissions across all scopes	By 2050	22
Renewable Energy	Implementation of solar farms at 3 Turkish airports	By 2025	29
Waste Management	Achievement of "Zero Waste" certification	By 2025	29
Emission Reduction	7,350 tons CO ₂ e reduced annually via solar	Starting 2025	29

Social Responsibility and Human Capital Management

The social pillar of TAV Airports' ESG strategy is built on the principle that financial success must be intertwined with social benefit and the development of local communities.¹⁸ The organization manages a workforce of over 20,000 employees and serves over 113 million

passengers annually, making its social impact both broad and deep.⁵

Workforce Development and Gender Equality

The organization emphasizes a culture of diversity, fairness, and inclusion.⁸ TAV Airports has formalized a Human Rights Policy that commits to the protection of employee rights according to international labor standards.²¹ Significant progress has been made in promoting gender equality in technical roles; for example, the company recently integrated four female colleagues into the Gazipaşa Aircraft Rescue and Fire Fighting (ARRF) team, a historically male-dominated field.³⁰

Continuous learning is facilitated through the TAV Academy, which provides skill development and training programs across all subsidiaries.⁸ Employee engagement mechanisms are in place to ensure a feedback loop between management and the workforce, and the company maintains high health and safety standards (ISO 45001) to protect its personnel.⁸

Community Engagement and Territorial Anchoring

TAV Airports views its airports as "territorial anchors" that must contribute positively to their local ecosystems.²¹ This approach involves several key ambitions:

- **Youth and Education:** The organization has a long-term collaboration with the Turkish Education Volunteers Foundation (TEGV) to provide educational opportunities to disadvantaged youth.³⁰
- **Noise Mitigation:** Proactive programs are in place to reduce noise exposure for local populations. For instance, the Almaty Airport expansion includes a dedicated Noise Insulation Program as part of its Horizon Project ESIA 2025.³²
- **Economic Contribution:** By prioritizing local procurement and favoring short supply routes, the company ensures that a significant portion of its operational spending remains within the local economy.²¹
- **Crisis Response:** The company demonstrated its social commitment following the 2023 earthquake in southeastern Turkey by mobilizing search and rescue teams (Havaş and TGS) and providing food and shelter to those affected.⁴

Corporate Governance and Ethical Frameworks

TAV Airports maintains a robust corporate governance structure that has consistently ranked among the highest in Turkey.¹⁶ The organization's governance is characterized by clear board oversight, a strong ethical culture, and a commitment to minority shareholder rights.²⁶

Board Structure and ESG Oversight

The Board of Directors is composed of members with diverse international expertise, including representatives from Groupe ADP.⁴ Oversight of ESG issues is integrated into the committee

structure:

- **Corporate Governance Committee:** Responsible for ensuring compliance with CMB principles and overseeing sustainability disclosures.²⁶
- **Risk Management Committee:** Tasks include identifying and assessing sustainability-related risks, including climate and cybersecurity risks.
- **Corporate Sustainability Committee:** Leads the development of ESG strategies and monitors technical progress against environmental and social targets.²⁹

The organization’s Corporate Governance Rating reached 9.69 out of 10 in 2023, reflecting a score of 9.59 for shareholder rights, 9.85 for public disclosure and transparency, and 9.94 for board functions.²⁷ This high score is a testament to the company’s adherence to the principles of equality, transparency, accountability, and responsibility.²⁶

Ethics, Compliance, and Whistleblowing

The ethical framework of TAV Airports is founded on its Code of Conduct, which defines the respect for laws and regulations as well as corporate values.²¹ This code is disseminated throughout the organization and its supply chain to ensure a consistent culture of integrity.²¹

A key pillar of this framework is the Whistleblowing System, which allows employees and external stakeholders to report breaches of ethics or compliance without fear of retaliation.²¹ The system is available 24/7 and guarantees the confidentiality of the whistleblower.²¹ Additionally, the company has established personal data protection and data security policies to manage cybersecurity risks, which are identified as material under the new TSRS reporting standards.⁸

Governance Metric	Performance / Detail	Source
Corporate Governance Score	9.69 / 10 (2023 Revision)	27
Shareholder Rights Score	9.59	27
Public Disclosure Score	9.85	27
Board of Directors Score	9.94	27
ESG Oversight	Corporate Sustainability Committee	29

External Assessment	SAHA Corporate Governance & Credit Rating	26
---------------------	---	----

Financial Performance and ESG-Linked Capital Markets

The relationship between TAV Airports' ESG performance and its financial stability is increasingly evident in its interactions with global capital markets.⁴ The company recognizes that strong ESG metrics are essential for maintaining a favorable credit profile and access to diversified financing sources.¹³

Credit Ratings and ESG Principles

Financial rating agencies such as S&P Global and Fitch have integrated ESG principles into their credit assessments of TAV Airports.¹³ S&P Global recently upgraded TAV Airports' issuer credit rating to 'BB' from 'BB-', citing improved credit metrics and the successful refinancing of the Antalya Airport debt.¹³ The agency noted that TAV benefits from geographic diversification and a high proportion of hard currency revenue (approximately 75%), which mitigates the impact of local currency volatility in Turkey.¹²

In late 2023, the organization successfully completed an inaugural USD 400 million Eurobond issuance at a yield of 8.50%.⁴ The offer was four times oversubscribed, demonstrating the confidence of international institutional investors in the company's business model and its long-term sustainability strategy.⁴ This issuance serves as a proxy for the organization's ESG maturity; as more investors utilize ESG criteria to evaluate infrastructure assets, TAV's high transparency and clear decarbonization targets make it an attractive investment.⁸

Strategic Capex and ESG Integration

The organization's capital expenditure (Capex) program is increasingly aligned with its sustainability targets.¹² TAV Airports has committed to defining a "carbon budget" for all new Capex projects exceeding EUR 5 million, ensuring that environmental impacts are considered during the design and construction phases.²² Major recent investments include:

- **Almaty Airport:** Construction of a new terminal (EUR 226 million) to double capacity and improve operational efficiency.¹²
- **Antalya Expansion:** Airside and terminal investments totaling EUR 810 million, completed in 2025.¹²
- **Ankara Esenboğa:** New operating rights until 2050 with an investment commitment of approximately EUR 300 million.⁴

These investments are not only aimed at traffic growth but also at integrating green

technologies, such as energy-efficient HVAC systems and LED lighting, which reduce long-term operational costs and support carbon neutrality goals.²⁹

Third-Party ESG Assessments and Performance

External ESG ratings provide a standardized measure of the organization's performance relative to its global peers.⁹ These ratings are critical for passive investment funds and ESG-oriented indices.³⁷

Sustainalytics ESG Risk Rating

Sustainalytics provides a multi-dimensional assessment of a company's exposure to material ESG risks and the efficacy of its management programs.³⁷

- **Rating:** 19.8 (Low Risk) as of March 2026.³⁷
- **Severity Level:** The score of 19.8 places TAV Airports in the "Low Risk" category, meaning that the organization has managed a significant portion of its potential ESG exposure.³⁷
- **Controversy Assessment:** The company's "Highest Controversy Level" is rated at 1 (Low), indicating that there have been no severe recent events related to labor, environmental, or governance issues that would fundamentally devalue the company's ESG profile.³⁷

S&P Global ESG Score and CSA

S&P Global assesses sustainability performance through the Corporate Sustainability Assessment (CSA).⁹

- **ESG Score:** 34.⁹
- **CSA Score:** 29.⁹
- **Peer Comparison:** This score measures TAV's performance relative to others in the Transportation and Transportation Infrastructure industry.⁹ While a score of 34 suggests there is still significant unmanaged risk compared to best-in-class global operators, it represents a substantial level of disclosure for an operator in emerging markets.⁹

Refinitiv (LSEG) and CDP Scores

In the LSEG (formerly Refinitiv) ESG assessments, TAV Airports has been recognized for having the highest ESG performance in the airport category.²⁹ The company's transparency is further validated by its historical CDP scores, which increased from 64 to 89 during the transition to more rigorous GRI G4 standards.¹⁶ This high transparency rate (89%) indicates that the company provides comprehensive data on its carbon emissions and water usage, allowing for accurate stakeholder evaluation.¹⁶

Reference Table with Credibility Assessment

#	Reference (APA 7th edition format)	Source Type	Credibility Score (0–10)	Justification for Score	Relevance to Query
1	TAV Airports. (2025). <i>TSRS Aligned Sustainability Report 2024</i> . Investor Relations.	Primary (Official Report)	10	Official company disclosure filed with regulators (KAP); audited data aligned with IFRS standards.	Core document for recent ESG developments and framework adoption.

Transparency and Limitations of Disclosure

The information presented in this report is based on a comprehensive review of publicly available material, including official corporate reports, regulatory filings with the Borsa Istanbul (KAP), and third-party assessments from recognized ESG rating agencies.¹ The knowledge cutoff for this analysis is March 20, 2026, which incorporates the most recent disclosures regarding the 2024 and 2025 reporting cycles.¹

Despite the high degree of transparency provided by TAV Airports, several limitations must be acknowledged:

- **Verified vs. Unverified Data:** While TAV Airports states that its ESG Key Performance Indicators are verified by an independent third party, the specific names of the ESG auditors (as distinct from the financial auditors) are not always explicitly provided in the executive summaries of the annual reports.⁴
- **Geographic Variances:** There is a notable difference in the granularity of data available for Turkish airports versus international operations in jurisdictions like Tunisia or Kazakhstan, although the organization is working to harmonize these under the TSRS framework.⁸
- **Paywalled Data:** Real-time data from certain premium providers (e.g., Bloomberg ESG Terminal or detailed MSCI reports) was not directly accessible for this analysis, necessitating the use of public summaries from these providers.⁹
- **Transition Reliefs:** The first year of TSRS implementation (2024) allows for certain "transition reliefs," meaning that comparative data from previous years may not yet be presented in the same format as current-year figures.⁸

Stakeholders seeking to independently verify these findings are encouraged to utilize the following authoritative databases:

1. **Public Disclosure Platform (KAP):** The primary source for all Turkish regulatory filings (<https://kap.org.tr/en/>).
2. **TAV Airports Investor Relations:** The repository for annual, sustainability, and interim reports (<https://ir.tav.aero/>).
3. **CDP Disclosure Portal:** For detailed environmental data and historical scores (<https://www.cdp.net/en/responses>).
4. **ACI Airport Carbon Accreditation Portal:** To track the real-time accreditation status of individual airports (<https://www.airportcarbonaccreditation.org/>).

In summary, TAV Airports has demonstrated a proactive and sophisticated approach to ESG disclosure, evolving from early GRI adoption to becoming a pioneer in IFRS-aligned sustainability reporting in the Turkish and regional markets.⁸ The organization's strong governance, clear environmental roadmap, and strategic integration with Groupe ADP position

it as a resilient player in the transition to a sustainable aviation industry.⁴
