

Comprehensive Strategic Assessment of Environmental, Social, and Governance Disclosures in Astro Malaysia Holdings Berhad (ASTR.KL)

The entity identified by the stock ticker ASTR.KL is Astro Malaysia Holdings Berhad, a preeminent investment holding company and Malaysia's leading integrated media and entertainment group.¹ Incorporated in 1996 and listed on the Main Market of Bursa Malaysia Securities Berhad, the organization functions as a multi-platform content creator, aggregator, and distributor, serving a substantial portion of the Malaysian demographic.¹ The group's primary business activities are categorized into three core operating segments: Television, which encompasses pay-TV, NJOI (subscription-free satellite TV), and sooka (streaming); Radio, featuring the nation's top-ranked audio brands; and Others, including digital media solutions, home shopping (Go Shop), and talent management.² Headquartered at the All Asia Broadcast Centre (AABC) in Bukit Jalil, Kuala Lumpur, Malaysia, the company is classified within the Telecommunications & Media sector.³ This identification is confirmed through official disclosures from the Bursa Malaysia exchange website and the company's investor relations portal.¹ No other entities share this specific ticker on the Kuala Lumpur exchange, ensuring a unique identification for this analysis.

Evolution of the Sustainability Disclosure Framework (2014–2023)

The decade spanning 2014 to 2023 represents a transformative period for Astro Malaysia Holdings, during which its sustainability reporting transitioned from basic corporate social responsibility narratives to a sophisticated integrated reporting model aligned with global standards. This progression was largely catalyzed by the evolving regulatory environment in Malaysia and the group's internal recognition of ESG as a driver of long-term value creation.

The Foundation of ESG Benchmarking (2014–2016)

In 2014, the Malaysian capital market witnessed a pivotal shift with the launch of the FTSE4Good Bursa Malaysia (F4GBM) Index, designed to measure the performance of companies demonstrating strong ESG practices.⁵ Astro Malaysia Holdings was recognized as a founding constituent of this index in December 2013, setting a precedent for its disclosure commitments in the 2014 financial period.¹ During these early years, the company's sustainability disclosures were primarily embedded within the "Sustainability" section of its Annual Reports, focusing heavily on social impact and community development through its

foundation, Yayasan Astro Kasih.⁸

By 2015, the group's reporting began to emphasize the link between its business model and social utility. The 2015 Annual Report highlighted a workforce of 4,800 employees and a commitment to producing 10,000 hours of local television content per annum, framing this as a contribution to the national cultural identity and human capital development.¹⁰ In 2016, the reporting focus expanded to include more granular details on environmental compliance, though quantitative environmental data remained sparse compared to later years.¹¹ This period reflected a "compliance-first" approach, meeting the minimum requirements of the Bursa Malaysia Listing Requirements while beginning to monitor emerging global trends in Socially Responsible Investment (SRI).⁶

Regulatory Alignment and Materiality Refinement (2017–2020)

A significant acceleration in disclosure quality occurred following the 2017 revision of the Malaysian Code on Corporate Governance (MCCG) and the subsequent enhancement of Bursa Malaysia's Sustainability Reporting Guide.¹³ Astro shifted its reporting toward a more structured "Sustainability Statement" format, which required the identification and prioritization of material sustainability matters based on stakeholder engagement.⁹ This shift moved the company beyond anecdotal social projects toward a systemic assessment of risks and opportunities related to its environmental footprint and ethical conduct.

Between 2018 and 2019, the group's disclosures addressed critical governance challenges, specifically related to data privacy and cybersecurity following high-profile data breach incidents in the Malaysian telecommunications sector.¹⁶ The 2019 reporting period saw the company explicitly referencing the Personal Data Protection Act (PDPA) as a core governance pillar, establishing it as a material matter for its digital-first business model.¹⁶ During these years, Astro also began to formalize its five ESG Pillars: Responsible Business, Caring for Our Environment, Voice for Good, Education for All, and Community Development.¹ These pillars provided a consistent framework for tracking progress and ensuring that sustainability was integrated into the group's strategic drivers.

The Shift to Integrated Reporting and Climate Strategy (2021–2023)

The publication of the "Integrated Annual Report 2021" (IAR2021) marked a definitive turn toward international best practices.⁹ This report was guided by the International Integrated Reporting Framework issued by the International Integrated Reporting Council (IIRC), adopting the "Six Capitals" model to explain how the company creates value over the short, medium, and long term.⁹ For the first time, the group explicitly mentioned reporting against the Global Reporting Initiative (GRI) Standards "where relevant and possible," indicating a move toward standardized quantitative metrics.⁹

In 2022 and 2023, the focus sharpened on climate-related financial disclosures. Following the

global momentum of the Task Force on Climate-related Financial Disclosures (TCFD), Astro began incorporating climate risk assessments into its governance and risk management processes.⁷ The launch of the group's comprehensive Climate Roadmap in 2023 established a formal decarbonization pathway, targeting carbon neutrality for internal operations by 2040 and net-zero emissions by 2050.¹ This period also introduced verified greenhouse gas (GHG) emission data, covering Scope 1, Scope 2, and limited Scope 3 categories such as business travel and employee commuting.²³

Year	Milestone Development in ESG Reporting	Framework/Standard Adopted	Strategic Relevance
2014	Founding constituent of FTSE4Good Bursa Malaysia Index	Bursa MMLR	Established baseline for ESG benchmarking. ¹
2017	Shift to materiality-based Sustainability Statement	MCCG 2017 / Bursa Guide	Prioritized EESG risks material to stakeholders. ¹⁴
2018	Heightened disclosure on Data Privacy/PDPA	PDPA 2010	Addressed systemic risks in digital operations. ¹⁶
2021	Publication of first Integrated Annual Report	IIRC / GRI	Holistic narrative on value creation via 6 Capitals. ⁹
2022	Adoption of TCFD-aligned reporting	TCFD / UNSDG	Integrated climate risk into financial strategy. ⁷
2023	Launch of Climate Roadmap and 2040 Neutrality Target	GHG Protocol	Committed to a long-term decarbonization pathway. ¹

Environmental Pillar: Decarbonization and Operational Efficiency

Astro’s environmental strategy is characterized by an transition from direct operational footprint management to a systemic focus on lifecycle impacts and technological innovation. The group has adopted the GHG Protocol to quantify its emissions, with a primary objective of minimizing the environmental impact of its high-intensity broadcasting operations.

Greenhouse Gas Emissions Performance

The company’s carbon footprint is dominated by its electricity consumption, which fuels its broadcast centers, satellite uplinks, and data server infrastructure. In the 2025 financial period, the group reported total operational GHG emissions of 22,223.9 metric tons of CO_2e , reflecting a 3.01% year-on-year reduction.²³ A deeper longitudinal analysis reveals that Scope 1 emissions—direct emissions from company-owned assets and fuel—have decreased by 42.75% since 2019.²³ This downward trend suggests a successful optimization of its vehicle fleet and a shift toward more energy-efficient stationary combustion sources.

Scope 2 emissions, resulting from purchased electricity, remain the largest contributor to the group’s footprint. In FY25, overall electricity consumption decreased by 3.0% to 27.9 million kWh, although electricity intensity per RM million of revenue saw a slight increase of 8.7% due to revenue fluctuations.²⁴ To counteract this reliance on the national grid, the group has invested in onsite renewable energy. The solar panel installation at the All Asia Broadcast Centre (AABC) covers approximately 100,000 square feet and harvested 1.6 million kWh of photovoltaic energy in FY25.¹⁹ This renewable generation accounts for 7.8% of the AABC’s total energy consumption and avoided approximately 1,239.9 tCO_2e of emissions.²⁴

Emission Category	FY2025 Metric (tCO2e)	FY2024 Metric (tCO2e)	Long-term Trend (Since 2019)
Scope 1 (Direct)	Verified	Verified	-42.75% ²³
Scope 2 (Indirect - Energy)	Verified	Verified	Downward ²³
Scope 3 (Value Chain)	8,290.1	8,280.5	+60.51% (Disclosure expansion) ²³

Total Operational GHG	22,223.9	22,912.8	-3.01% (YoY) ²³
-----------------------	----------	----------	----------------------------

Technological Innovation as a Green Catalyst

Astro has pioneered the use of Extended Reality (XR) and virtual production technology as a fundamental sustainability tool. By replacing traditional physical sets with digital environments, the group has significantly reduced the environmental footprint associated with set construction, location transport, and disposal of physical materials.²⁴ This "ESG Breakthrough Innovation" was recognized by the UN Global Compact Network Malaysia & Brunei, as it demonstrates how a media company can leverage its core technological competencies to drive decarbonization.²⁵ The reduction in resource needs for transport and storage of physical sets represents a permanent shift in the company's "Industrial Capital" toward a low-carbon model.²¹

Circular Economy and Product Stewardship

The group's environmental responsibility extends to the "Social and Relationship Capital" through its management of consumer hardware. The newer generations of Astro decoders, specifically the Ultra and Ulti Boxes, are 40% and 80% smaller than previous models, respectively.⁹ This material efficiency reduces the embedded carbon of the devices and minimizes logistical emissions. Furthermore, the company maintains a circularity program where old decoders are collected for refurbishment and redeployment.²⁴ Devices that have reached their end-of-life are disposed of through vendors certified by the Department of Environment for e-waste recycling, ensuring compliance with the Waste Electrical and Electronic Equipment (WEEE) directive.²⁴

Water management is another component of the group's natural capital stewardship. The AABC facility utilizes a 13,500-liter rainwater harvesting system to supplement water needs for landscape maintenance and cleaning.¹⁵ This initiative, combined with motion-sensor plumbing fixtures, resulted in a 1.5% decrease in water consumption intensity to 39.9 m^3 per RM million of revenue in FY25.²⁴ These efforts reflect an integrated approach where small-scale operational efficiencies contribute to the broader net-zero 2050 ambition.

Social Pillar: Community Engagement and Content as a Catalyst for Change

Astro defines its social impact through the leverage of its massive media platforms to drive national progress, education, and community resilience. The company identifies "Human Capital" and "Social and Relationship Capital" as its primary value drivers, focusing on diversity, access to education, and public service.

The "Voice for Good" Narrative

As Malaysia's largest content creator, Astro views its reach as a "Voice for Good." This initiative involves the strategic broadcast of Public Service Announcements (PSAs) and ESG-themed content across its television, radio, and digital channels. In the most recent reporting cycle, the group aired 12,780 hours of "Voice for Good" content, a substantial increase from previous years.²¹ This programming covers critical themes such as environmental awareness, health advisories, and social inclusivity, effectively using the group's "Intellectual Capital" to influence positive behavioral change among its 5.2 million households.¹

The group also supports environmental storytelling through its "Rimba Kita" initiative, which features environmental documentaries such as *Save Our Earth* and *Gardeners of the Rainforest* on its On Demand platforms.²⁴ By providing a platform for local environmental filmmakers, Astro amplifies the conversation on biodiversity conservation, bridging the gap between media entertainment and environmental advocacy.²⁴

Education for All and Youth Empowerment

Astro's most significant long-term social investment is in the education sector, where it has committed over RM131 million since FY12.¹⁹ The flagship *Astro Tutor* TV channels reach approximately 5 million students annually, offering curriculum-aligned supplementary learning content that is especially critical for those in remote or underserved areas.¹⁹ This commitment to "Education for All" is institutionalized through the provision of free Astro decoders and 13 educational channels to 10,500 government schools, teacher activity centers, and pediatric wards nationwide.¹⁹

Beyond academic learning, the group engages in sports-based community development through programs like *Astro Kem Badminton* and clinics for the *Netball Super League*.⁵ These initiatives aim to foster talent and physical well-being among Malaysian youth, aligning the company's brand with healthy lifestyles and national development goals. The group's support for youth-led movements like UNDI18 through its AWANI news brand further ensures that the views of the next generation are reflected in the national discourse.¹⁹

Workforce Diversity and Inclusion

The group's internal social strategy focuses on nurturing its 4,800-strong workforce, emphasizing a culture of "Performing Relentlessly" and accountability.¹⁰ Diversity is a core tenet of this strategy; as of 2024, approximately 33% of the group's Board of Directors are women, exceeding the national target for gender diversity in Malaysian PLCs.²⁹ The company also invests heavily in talent development, with an emphasis on upskilling employees for the digital economy. This includes training on data privacy, cybersecurity, and new production technologies like XR, ensuring that its "Human Capital" remains competitive in an era of rapid

technological disruption.⁹

Social Metric	FY2025 Performance	FY2024 Performance	Strategic Impact
Voice for Good Hours	12,780 hours	7,770 hours	Expanded influence on community positivity. ²¹
Students Reached (Annual)	>5 million	>5 million	Championing lifelong learning and literacy. ¹⁹
Educational Schools Equipped	10,500	10,000	Infrastructure support for national education. ¹⁹
Local Content Investment	RM379 million	RM300m+ (Est)	Supporting the creative economy and IP ownership. ¹⁰
Board Gender Diversity	33%	30%	Alignment with MCCG gender targets. ¹⁵

Governance Pillar: Accountability, Ethics, and Data Resilience

The governance framework at Astro Malaysia Holdings is designed to ensure that sustainability is not a peripheral activity but a core component of business strategy. The group consistently achieves high scores in governance assessments due to its robust ethical standards and proactive management of digital risks.

Board Oversight of Sustainability

The group’s Board of Directors holds the ultimate responsibility for overseeing the ESG roadmap and its integration into daily operations.¹⁵ A significant development in the group's governance structure was the formation of the ESG Management Committee (ESG AMC), chaired by the Group CEO.¹⁵ This committee meets every two months to monitor the execution of the Climate Roadmap and the progress of the five ESG pillars.²² To ensure total alignment, the Board’s nominee on sustainability is the Chairman, who bridges the gap between high-level

strategic direction and executive implementation.²²

A critical indicator of governance maturity is the link between ESG performance and executive remuneration. The group has embedded ESG KPIs—such as GHG reduction targets, "Voice for Good" content hours, and cybersecurity metrics—into the annual Corporate Scorecard used to assess the performance of the CEO and the Senior Leadership Team.¹⁵ This mechanism ensures that sustainability outcomes directly influence management incentives.

Ethical Business Conduct and Anti-Corruption

Astro operates under a rigorous Code of Business Ethics (CoBE), which is further reinforced by the Astro Anti-Corruption Framework (AACF) and the Fraud Management and Whistleblowing Policy and Procedures.⁹ In recent years, the group has extended these standards to its supply chain through the introduction of a third-party CoBE and mandatory vendor integrity pledges.⁹ These measures are designed to safeguard the group from bribery and corruption risks, which is particularly relevant given its large network of content providers and technology vendors.

The company's commitment to "Responsible Business" is reflected in its high percentile ranking in the FTSE4Good assessment, where it achieved a maximum score of 5 out of 5 for its Governance pillar.¹⁵ This external validation confirms that the company's internal controls are aligned with international best practices.

Cybersecurity and Data Privacy Resilience

In the digital media sector, data privacy and cybersecurity are paramount material issues. Astro has faced significant challenges in this area, including reported data breaches in 2018 and 2019 that affected customer information such as MyKad details.¹⁶ In response to these events, the group has transformed its approach to data protection. It now conducts mandatory annual Personal Data Protection Act (PDPA) assessments for all employees and has implemented a comprehensive cybersecurity roadmap.⁹

The group's strategy has evolved from reactive incident response to proactive risk management. It utilizes advanced monitoring systems and regular due diligence questionnaires for third-party partners to prevent unauthorized access to its vast customer database.⁹ This resilience is vital for maintaining customer trust as the group transitions toward becoming a digital-first content aggregator.

Ratings and External Recognitions

Astro Malaysia Holdings' ESG performance is subject to rigorous external evaluation by global and national rating agencies, which consistently place the company in the top tier of its peer group.

Global Rating Agency Performance

In the December 2024 assessment by FTSE Russell, the group’s ESG score improved significantly to 4.1 out of 5.0.⁵ This score places Astro in the 100th percentile of media companies worldwide, effectively ranking it among the top 1% of its global peers.¹ The improvement was largely attributed to more transparent disclosures of climate change initiatives and the launch of the Climate Roadmap.⁵

Sustainalytics, another prominent ESG research firm, rates the group as having "Low ESG Risk" with a score of 13.2 as of the 2024 evaluation.¹⁹ This rating places the company in the top 7% of all assessed companies globally.⁷ Furthermore, the London Stock Exchange Group (LSEG) assigned the company an ESG score of 66/100, which denotes "good relative ESG performance and an above average degree of transparency in reporting material ESG data publicly".¹⁹

National and Industry Recognition

At the national level, the group was recognized as one of the Top 50 Public Listed Companies at the National Corporate Governance & Sustainability Awards (NACGSA) 2025.³⁴ This award, endorsed by the Securities Commission Malaysia, highlights the group’s excellence in integrating sustainability principles into corporate governance.³⁴ Additionally, the group was named a 2-Star Lister in the ESG Select List 2025 by the UN Global Compact Network Malaysia & Brunei, specifically for its "ESG Breakthrough Innovation" (XR technology) and its "Purposeful Partnership" in amplifying ESG stories.²⁵

Rating Agency	Score / Category	Date of Update	Industry Benchmark
FTSE Russell	4.1 / 5.0	Dec 2024	Top 1% globally (Media). ¹
Sustainalytics	13.2 (Low Risk)	2024	Top 7% globally (All). ⁷
LSEG (Refinitiv)	66 / 100	2025	Above Average Transparency. ¹⁹

Transparency and Limitations of the Analysis

This report is compiled using data available up to the knowledge cutoff date of March 2026. The analyst acknowledges certain limitations in the depth of information for specific historical periods or granular value chain data.

Knowledge Cutoff and Data Recency

All metrics related to the 2025 financial period (FY25) are based on the group's Integrated Annual Report 2025 and subsequent quarterly updates filed with Bursa Malaysia.¹ While the analyst has access to the most recent ratings from FTSE Russell (December 2024) and Sustainalytics (2024), real-time rating adjustments made in early 2026 may not yet be reflected in the public domain or summarized snippets.⁷

Data Verification and Unverified Claims

The analysis distinguishes between verified operational facts and forward-looking statements. Claims regarding the group's "Top 1%" global ranking are verified through both company press releases and independent news agencies citing FTSE Russell.⁵ However, the specific financial impact of the XR technology on production budgets (beyond its environmental impact) is labeled as "Unverified" because the group has not disclosed the precise capital expenditure or savings associated with its implementation.²⁵

The Scope 3 emission data is acknowledged as "Limited" in scope. While the group discloses 4 out of 15 categories, the remaining 11 categories (including downstream product use and end-of-life treatment of legacy devices) are not currently quantified with the same level of granularity as Scope 1 and 2 emissions.²³ This is a common limitation in the media industry but is explicitly noted here to maintain professional rigor.

Recommended External Databases for Independent Verification

Stakeholders wishing to independently verify the data points in this report are encouraged to utilize the following authoritative resources:

1. **Bursa Malaysia Sustainability Disclosure Portal:** The central repository for all mandatory ESG reports and governance filings for Malaysian PLCs.
2. **Astro Malaysia Investor Relations Portal:** Provides the full historical archive of Integrated Annual Reports, Corporate Governance Reports, and minutes of Annual General Meetings since the company's IPO.
3. **FTSE Russell ESG Ratings Index:** A subscription-based or partially public portal for

verifying the specific scores and industry-adjusted percentile rankings for the FTSE4Good series.

Concluding Strategic Synthesis

The analysis of Astro Malaysia Holdings Berhad's ESG trajectory from 2014 to 2023 reveals a company that has moved beyond a "social license to operate" toward a "sustainability-driven business model." The group's high ratings from global agencies are a reflection of a deeply integrated governance structure where ESG outcomes are tied to executive compensation and core business strategy. The third-order implications of its current strategy suggest that for a media company in an emerging market, the "Social" pillar (education and community reach) acts as the strongest hedge against long-term operational risks, while the "Environmental" pillar (XR technology and Climate Roadmap) serves as a catalyst for industrial capital innovation.

While the group faces ongoing challenges in data privacy resilience and Scope 3 transparency, its current trajectory places it as a benchmark for other Malaysian and ASEAN-based telecommunications and media entities. Future reporting cycles will likely see a greater emphasis on aligning with the Science-Based Targets initiative (SBTi) and providing more comprehensive disclosures on value-chain emissions as the 2040 carbon neutrality target approaches. This report serves as a definitive professional record of the group's current ESG standing and its decade-long journey toward sustainability leadership.
