

Comprehensive ESG Disclosure and Sustainability Performance Analysis for Emirates Telecommunications Group Company PJSC (e&)

The evolution of corporate sustainability within the Middle East and North Africa (MENA) region is epitomized by the strategic transformation of the Emirates Telecommunications Group Company PJSC, currently operating under the global brand identity e&.¹ This report provides an exhaustive analysis of the company identified by the Abu Dhabi Securities Exchange (ADX) ticker EAND.AD, encompassing its identification, a decade-long ESG reporting timeline from 2014 to 2023, and a critical assessment of its transparency and external ratings.² The transition of this entity from a traditional state-owned telecommunications provider to a diversified global technology and investment conglomerate represents a significant case study in the integration of Environmental, Social, and Governance (ESG) principles into core business strategy.⁴

Company Identification and Strategic Business Context

The entity associated with the ticker EAND.AD is the Emirates Telecommunications Group Company PJSC.¹ Established in 1976 and headquartered in Abu Dhabi, United Arab Emirates, the company was formerly known as Emirates Telecommunications Corporation (Etisalat) before its high-profile rebranding in February 2022.¹ The group is classified within the Telecommunications and Technology sector, operating as a leading global technology powerhouse that delivers digital solutions, smart connectivity, and next-generation technologies across 38 countries in the Middle East, Asia, Africa, and Europe.¹

The primary business activities of e& are structured around five distinct pillars designed to maximize growth in the digital era: e& UAE, e& international, e& life, e& enterprise, and e& capital.⁸ These verticals cover traditional mobile and fixed-line services, global telecommunications operations, consumer-centric digital services (fintech, entertainment), enterprise-grade solutions (cloud, cybersecurity, IoT, AI), and strategic investment activities.¹ As of the end of 2024, the group's aggregate subscriber base reached 244.7 million, reflecting its status as a critical player in the global digital infrastructure.¹⁰

The identification of EAND.AD as Emirates Telecommunications Group Company PJSC is verified through primary exchange data from the Abu Dhabi Securities Exchange (ADX), which

serves as its primary listing venue.² Additional verification is provided by global financial platforms including Bloomberg, Reuters, and Investing.com, which track the ticker EAND.AD specifically to the Abu Dhabi-listed entity.³ The company's legal structure is a Public Joint Stock Company, with the UAE Federal Government maintaining a majority stake, though institutional and foreign ownership was expanded to 49% in 2021 to facilitate deeper integration into global capital markets.²

ESG Report Timeline Analysis (2014–2023)

The reporting history of Emirates Telecommunications Group Company PJSC reflects a broader shift in the UAE market from voluntary corporate social responsibility (CSR) to mandatory and framework-aligned ESG disclosure. This decade (2014–2023) is characterized by the institutionalization of sustainability governance and the adoption of increasingly rigorous international standards.

The Era of Decentralized CSR and Foundational Growth (2014–2017)

In the early part of this decade, the group's sustainability efforts were categorized under the

traditional CSR paradigm. In 2014, the company was primarily focused on regional expansion, most notably the acquisition of a 53% stake in Maroc Telecom, which significantly increased the complexity of its social and environmental footprint across Africa.⁵ During this period, sustainability disclosures were typically embedded within the "Community" or "CSR" sections of the annual reports, focusing on philanthropic contributions and basic digital inclusion initiatives.¹⁷

A major regulatory milestone occurred in 2015 when the UAE Federal Government allowed foreign and institutional investors to own up to 20% of the company's shares.⁵ This opening of the capital structure forced a higher degree of transparency, as international investors began requiring data on governance and operational risks.¹⁹ In 2016 and 2017, the company began aligning its strategic reporting with national priorities such as the UAE Vision 2021 and the Abu Dhabi Economic Vision 2030, which emphasized the role of telecommunications in building a sustainable, knowledge-based economy.²⁰

Standardization and the Inaugural Sustainability Reports (2018–2020)

The year 2018 represents a definitive shift in the company's ESG maturity with the publication of its inaugural standalone Sustainability Report.²² This report was prepared in accordance with the Global Reporting Initiative (GRI) Standards: Core option, focusing specifically on the group's UAE operations.²² It introduced five sustainability pillars: Accountable Business Practices, Marketplace and Customers, Connecting Communities, Environmental Protection, and Our People.²² This report provided the first comprehensive baseline for economic, environmental, and social performance metrics, establishing a formal framework for stakeholder engagement.²²

In 2019, the group expanded its ESG commitments, aligning its 2019 Sustainability Report with the Sustainability Accounting Standards Board (SASB) for the telecommunications industry and the Task Force on Climate-related Financial Disclosures (TCFD) recommendations.²³ The company emphasized its 5G rollout as a catalyst for environmental efficiency across other sectors, citing the potential for digital transformation to reduce carbon emissions through optimized logistics and smart city solutions.²³

The 2020 reporting cycle was significant for two reasons: the group's response to the global pandemic and the introduction of external assurance. The 2020 Sustainability Report highlighted the company's role in enabling remote education and telehealth services, providing a tangible demonstration of social "S" performance.²⁵ Most importantly, the group engaged Bureau Veritas to provide independent "Limited" assurance on key environmental and social KPIs, conducted according to the AA1000 Assurance Standard (AA1000AS v3).²⁶ This was the first time the company's non-financial data was subjected to third-party verification, marking a commitment to data integrity and investor trust.²⁶

Strategic Rebranding and Net Zero Acceleration (2021–2023)

The rebranding to e& in early 2022 was not merely aesthetic but signaled a transformation in sustainability governance. The 2021 Sustainability Report (the fourth annual edition) reaffirmed the group's alignment with the UAE's Net Zero by 2050 Strategic Initiative, announced at COP26.⁴ The group began incorporating climate risk assessments into its enterprise risk management (ERM) framework, acknowledging the physical and transition risks associated with climate change in its 16 core markets.⁴

In 2022, e& published its first Integrated Report, which fused financial and sustainability data into a single narrative of value creation.⁸ At the COP27 summit held in Egypt, e& UAE announced a commitment to achieve Net Zero Scope 1 and 2 emissions in its UAE operations by 2030.²⁸ This commitment was supported by the launch of the group's first Climate Transition Plan, which detailed the mechanism for decarbonizing its network infrastructure through renewable energy and fleet electrification.³⁰

The 2023 reporting cycle reached the highest level of framework integration. The 2023 Integrated Report was prepared with reference to the GRI 2021 Universal Standards and incorporated the World Economic Forum (WEF) Stakeholder Capitalism metrics.³¹ A critical milestone in 2023 was the validation of the group's near-term emissions reduction targets by the Science Based Targets initiative (SBTi).³⁰ These targets include a 43% reduction in Scope 1 and 2 emissions and a 25% reduction in Scope 3 emissions by 2030, using a 2022 baseline.³⁰ Additionally, the group expanded its Net Zero commitment to cover its entire global operations by 2040.³⁰

Year	Milestone / Development	Reporting Frameworks	Assurance / Ratings	Source
2014	Acquisition of Maroc Telecom; Regional Expansion.	Internal CSR	No external assurance.	⁵

2023	SBTi target validation; Group Net Zero 2040.	GRI 2021, SASB, WEF	CDP Score: B; MSCI Rating: A.	31

Deep Dive into ESG Frameworks and Standards Adoption

The evolution of Emirates Telecommunications Group Company PJSC's sustainability journey is defined by its increasing reliance on internationally recognized disclosure frameworks. These standards act as the mechanism for ensuring that the "techco" transition is measured against global benchmarks for environmental stewardship, social equity, and corporate integrity.

Global Reporting Initiative (GRI) Standards

The GRI has served as the backbone of the company's ESG disclosures since 2018.²² The transition from the GRI Core option to the GRI 2021 Universal Standards in the 2023 report

reflects a shift toward more granular reporting on human rights and governance.⁸ The company utilizes a comprehensive GRI Content Index that maps individual disclosures (such as 302-1 for energy consumption and 403-1 for occupational health and safety) to the body of its integrated report.³² This mapping ensures that stakeholders can trace the group's performance across diverse material topics, ranging from water usage (GRI 303) to anti-corruption training (GRI 205).³²

Sustainability Accounting Standards Board (SASB)

Given the group's strategic pivot toward becoming a technology-led organization, the SASB Telecommunications Services standard has become increasingly relevant. This framework focuses on the financial materiality of ESG issues.¹³ For e&, this involves disclosing metrics related to data privacy, cybersecurity incidents, and the energy efficiency of its data centers and network infrastructure.³¹ The integration of SASB indicators allows the group to communicate with institutional investors using the specific KPIs that influence the industry's risk profile and long-term valuation.³³

Task Force on Climate-related Financial Disclosures (TCFD)

TCFD alignment is a core component of e&'s climate strategy. The group reports on climate governance, highlighting the Board's oversight of climate risks and opportunities.²⁷ The risk management section of its reports details the identification of transition risks, such as the potential for carbon pricing in its international markets, and physical risks, such as the impact of extreme heat on network equipment in the MENA region.³⁰ By 2023, the group had matured its TCFD reporting to include scenario analysis, helping to quantify the potential financial impacts of different global warming trajectories on its asset base.³⁰

Science Based Targets initiative (SBTi)

The validation of e&'s emissions targets by the SBTi in 2023 marked a transition from aspirational goals to scientifically rigorous commitments.³⁰ This validation confirms that the group's decarbonization pathway is aligned with the goals of the Paris Agreement to limit global temperature increases.³⁰ The commitment to reduce Scope 1 and 2 emissions by 43% by 2030 is particularly significant given the energy-intensive nature of 5G networks and the group's massive regional data center footprint.¹⁰

Environmental Stewardship and the Climate Transition Plan

The environmental pillar of e&'s ESG strategy is defined by its proactive approach to decarbonization and resource efficiency. As the group expands its 5G network and data center services, managing its carbon footprint has become its most critical environmental challenge.

Emissions Profile and Decarbonization Mechanism

In 2023, e& emitted approximately 1,849,745 tonnes of CO_2e from its direct operations (Scope 1 and 2).³⁰ The primary source of these emissions is electricity consumption, accounting for 79% of the total, followed by stationary combustion in generators used to power remote network sites.³⁰ To address this, the group's Climate Transition Plan identifies four primary levers for decarbonization:

1. **Energy Efficiency:** Retrofitting data centers with advanced cooling systems and deploying AI-driven network optimization to reduce idle power consumption.²⁵
2. **Renewable Energy Procurement:** Increasing the share of renewable electricity in its mix through power purchase agreements (PPAs) and on-site solar installations.⁷
3. **Fleet Electrification:** Transitioning its operational vehicle fleet in the UAE and international markets to electric and hybrid alternatives.³⁰
4. **Supply Chain Engagement:** Working with vendors to reduce Scope 3 emissions, which represent a significant portion of the group's total carbon footprint, particularly from the production and disposal of network equipment and consumer devices.³⁰

Regional Successes: The Case of e& Egypt

The group's commitment to environmental goals is exemplified by its Egyptian subsidiary, e& Egypt. In 2024, e& Egypt reported that its share of renewable energy reached 28% of total consumption, a significant increase from 14% in 2023.⁷ The subsidiary has deployed 472 base stations powered by solar or hybrid energy systems.⁷ Furthermore, e& Egypt achieved a 20% year-over-year reduction in carbon intensity (Scope 1 and 2), reporting 0.16 mtCO_2e per Terabyte of data transmitted.⁷ These metrics demonstrate that the group is successfully localizing its global sustainability targets to meet specific market conditions.

Circularity and Waste Management

The transition to a circular economy is an emerging theme in the group's ESG narrative. e& has implemented electronic waste (e-waste) recycling programs and is working toward a goal of minimizing waste to landfills.⁶ In the UAE, the "Save & Grow" initiative focuses on the lifecycle of mobile devices, encouraging consumers to recycle or trade in old hardware to reduce the environmental impact of consumer electronics.⁶ Internally, the group has adopted e-invoicing and digital activation processes, which have significantly reduced paper waste across its retail and corporate operations.²⁸

Social Performance and Human Capital Development

The "Social" dimension of e&'s ESG framework focuses on three primary areas: digital inclusion, diversity and inclusion within the workforce, and community empowerment through digital

tools.

Digital Inclusion and Financial Technology (FinTech)

As a leading "techco," e& views its digital services as a tool for social development. The group's expansion into FinTech through "e& money" and "SuperPay" is a core component of its strategy to promote financial inclusion in markets like the UAE and Egypt.⁷ These platforms provide unbanked or underbanked populations with access to digital wallets, money transfers, and payment services, bridging the financial divide.⁵ During the pandemic, the group's social impact was highlighted by its support for over 1.2 million students through zero-rated data for educational platforms and the provision of remote learning tools.²⁶

Workforce Diversity and Talent Development

The group is committed to fostering a diverse and inclusive workplace. In Egypt, e& reported that female representation in the workforce reached 28% in 2024, with women making up 31% of new hires.⁷ The company also emphasizes "Emiratization" in its home market, focusing on developing UAE national talent for leadership roles in the technology sector.⁷ Talent development is supported by extensive training programs; e& Egypt delivered 75,864 hours of training to its 8,879 employees in 2024, an increase of 44% over the previous year.⁷ This focus on human capital is essential for maintaining the technical expertise required for the group's transformation into a technology conglomerate.

Community Investment and Impact

e&'s community investment strategy is aligned with the UN SDGs and national priorities. In 2024, e& Egypt's community investments totaled EGP 31 million, bringing its total social investment to EGP 181 million since 2007.⁷ These initiatives focus on healthcare, such as providing digital support for medical facilities, and education, such as training youth in digital skills.⁷ The group's social initiatives reached an estimated 1.5 million beneficiaries in 2024.⁷

Governance, Ethics, and Data Privacy Controversies

Governance is the mechanism through which e& manages the risks and responsibilities of its global operations. The company has strengthened its governance framework to ensure board-level oversight of ESG issues and to address the complex challenges of data privacy and cybersecurity.

Sustainability Governance Structure

Sustainability at e& is overseen by a Sustainability Committee, which was established in 2023 and is chaired by the Group CEO.³¹ This committee is supported by a dedicated Sustainability function that coordinates ESG strategy across all business units and international subsidiaries.³¹ The group has integrated ESG KPIs into its executive remuneration framework, ensuring that

senior management is held accountable for the company's sustainability performance.³¹

Ethics, Compliance, and Anti-Corruption

The group maintains a robust ethics and compliance program, guided by its Code of Conduct. In 2024, 100% of employees and board members in the Egyptian operations formally acknowledged compliance with the Code.⁷ The company's GRI index confirms that its operations are periodically assessed for risks related to corruption, and it provides mandatory anti-bribery and anti-corruption training for all staff.²⁶

Data Privacy and the Ranking Digital Rights Controversy

As a major telecommunications and digital service provider, data privacy and cybersecurity are high-materiality issues for e&. While the company has invested heavily in cybersecurity infrastructure—evidenced by its acquisition of Help AG—it has faced external criticism regarding its transparency and user rights.⁵

Analysis by "Ranking Digital Rights" (RDR) in 2015 and 2017 highlighted significant gaps in the group's public commitments to privacy and freedom of expression.³⁶ The 2015 RDR Index gave Etisalat (now e&) the lowest overall score among telecommunications companies evaluated, citing a lack of disclosure regarding its process for responding to government requests for user data.³⁶ The analysis noted that while the group operates in a regulatory environment that often prohibits such disclosures, the lack of transparency remains a concern for international stakeholders.³⁶ The 2017 RDR report indicated that the company provided no formal commitment to respect users' freedom of expression and privacy as human rights and had no senior-level oversight dedicated to these issues at the time.³⁷ Since then, the group has worked to enhance its governance, but these historical controversies underscore the ongoing tension between local regulatory compliance and international ESG expectations for digital rights.³⁷

External ESG Ratings and Benchmarking Analysis

The ESG performance of Emirates Telecommunications Group Company PJSC is monitored by leading international rating agencies. These assessments provide an objective benchmark of the group's sustainability maturity relative to its global peers.

MSCI ESG Rating

MSCI ESG Ratings assess companies on a scale from AAA (Leader) to CCC (Laggard). e& currently maintains an "A" rating from MSCI, which places it among the stronger performers in the global telecommunications and technology industry.⁷ This rating reflects the company's robust management of ESG risks and its proactive adoption of international reporting standards.³¹

Sustainalytics ESG Risk Rating

Sustainalytics provides an absolute measure of unmanaged ESG risk, where a lower score indicates better performance. As of late 2025, e& was assigned a score of 26.6, categorized as "Medium Risk".⁴¹ The score is decomposed into "Exposure" (the extent to which the company faces industry-specific risks) and "Management" (how well the company is mitigating those risks).⁴¹ The medium risk rating suggests that while e& is exposed to significant material ESG issues—such as carbon footprint, labor practices in diverse markets, and data privacy—it has implemented effective policies and programs that manage approximately half of its manageable risk.⁴²

S&P Global ESG Score

The S&P Global ESG Score measures a company's performance on and management of material ESG risks, opportunities, and impacts compared to its peers. e& received an ESG score of 44 as of February 2, 2026, based on its participation in the S&P Global Corporate Sustainability Assessment (CSA).¹⁵ This score indicates that the group is performing within the average range for the telecommunications sector globally.¹⁵

CDP and FTSE4Good

The group has been reporting to the CDP global disclosure system since 2023, receiving a "B" score in its most recent assessment, which reflects its improved environmental management and climate strategy.⁷ Additionally, e& is a constituent company in the FTSE4Good Index Series, which identifies companies demonstrating strong Environmental, Social, and Governance practices.⁷

Rating Agency	Score / Rating	Assessment Date	Status	Source
MSCI	A	2023	Leader / Average	31
Sustainalytics	26.6	2025	Medium Risk	41
S&P Global	44	2026	Industry Peer Avg	15
CDP	B	2023	Management Level	7

ISS ESG	C	2023	Prime Potential	45
FTSE4Good	Constituent	2023	Qualified	7

Reference Table and Credibility Assessment

This analysis relies on a combination of primary corporate disclosures and secondary assessments from recognized financial and ESG data providers.

Transparency & Limitations

The information presented in this report is current as of the knowledge cutoff date of March 20, 2026.² The analysis is derived from public disclosures, regulatory filings, and third-party assessments available within the provided research material.

Data Limitations and Access

A primary limitation of this analysis is the lack of access to real-time or paywalled proprietary analyst reports from firms like Bloomberg Intelligence or Refinitiv, which might offer more granular daily ESG sentiment analysis. Furthermore, while e& has significantly improved its reporting, some data points for smaller international subsidiaries remain unverified at the group

level. The "unmanaged risk" identified by Sustainalytics reflects the inherent difficulty in fully verifying labor and environmental practices in jurisdictions with different regulatory standards than the UAE.⁴²

External Verification Recommendations

To independently verify the information and monitor real-time ESG developments for EAND.AD, the following external databases are recommended:

1. **Abu Dhabi Securities Exchange (ADX) Disclosure Portal:** The primary source for all official financial and sustainability filings.
2. **e& Group Investor Relations Sustainability Page:** Provides the archive of annual integrated and sustainability reports [<https://www.eand.com/en/sustainability.html>].
3. **CDP Global Disclosure Database:** For detailed responses regarding the group's carbon emissions and climate strategy [<https://www.cdp.net/en/responses>].
4. **GRI Content Index Database:** To check the compliance status of the group's reports with the latest GRI standards.

Conclusions and Synthesis of Findings

The Emirates Telecommunications Group Company PJSC (e&) has undergone a profound transformation in its ESG journey between 2014 and 2023. This transition is characterized by a move from localized CSR initiatives to a highly sophisticated, group-wide ESG framework that is deeply integrated into its corporate strategy. The group's adoption of GRI, SASB, and TCFD standards, combined with the validation of its decarbonization targets by the Science Based Targets initiative, positions it as a regional leader in sustainability disclosure.

The environmental pillar is currently the group's most developed area of reporting, with a clear roadmap toward Net Zero by 2040 and a demonstrated ability to implement renewable energy solutions in key markets like Egypt. Socially, the group is leveraging its "techco" identity to drive digital inclusion and FinTech adoption, although it continues to face scrutiny from digital rights monitors regarding data privacy transparency. From a governance perspective, the institutionalization of sustainability at the board level and the use of external assurance represent significant milestones in building investor trust.

As e& continues to expand its global footprint and invest in advanced technologies like AI, its ESG profile will increasingly be judged by its ability to manage the societal and ethical impacts of these innovations. The group's "A" rating from MSCI and "Medium Risk" score from Sustainalytics suggest a stable trajectory, but the achievement of its 2030 and 2040 climate goals will require sustained capital investment and continued transparency in its international operations. Move toward integrated reporting reflects a mature understanding that long-term value creation is inseparable from environmental and social responsibility.
