

Comprehensive Strategic Analysis of ESG Performance and Disclosure: IOI Properties Group Berhad (2014–2023)

Corporate Identification and Business Profile

The subject of this comprehensive analysis is IOI Properties Group Berhad, a preeminent real estate conglomerate headquartered in Malaysia. The company is identified by the stock ticker IOIP.KL (Reuters) and IOIPG (Bursa Malaysia), where it is listed on the Main Market.¹ For the purposes of precise corporate identification, IOI Properties Group Berhad is a public limited company incorporated in Malaysia in 2013 and subsequently listed on January 15, 2014, following a significant corporate demerger from IOI Corporation Berhad.¹ The group's primary business activities encompass property development, property investment, and the management of hospitality and leisure assets across three key geographical markets: Malaysia, Singapore, and the People's Republic of China (PRC).⁵

The group maintains its corporate headquarters at IOI City Tower 2, IOI Resort City, 62502 Putrajaya, Malaysia.¹ According to exchange data and official company disclosures, the entity is classified under the Real Estate sector, specifically within the industry of Land Subdividers and Developers (SIC Code 6552).¹ The group operates as a subsidiary of Vertical Capacity Sdn Bhd, which holds a controlling interest of approximately 65.7%.¹

The identification of IOI Properties Group Berhad as the relevant entity for the ticker IOIP.KL is substantiated by multiple financial data providers and regulatory filings.¹ While the parent brand "IOI" is shared with IOI Corporation Berhad (KLSE: 1961), which focuses on integrated palm oil and resource-based manufacturing, IOI Properties Group Berhad functions as a standalone entity with a distinct governance structure and a specialized ESG reporting trajectory tailored to the built environment and urban sustainability.³

Chief Executive Officer	Lee Yeow Seng	1
Incorporation Year	2013 (Listing in January 2014)	1

Historical Context: The 2014 Demerger and the Genesis of Independent ESG Reporting

The emergence of IOI Properties Group Berhad as a separate listed entity in 2014 was a transformative event for the group's sustainability trajectory. Before the demerger, the property business was integrated within the broader IOI Corporation Berhad conglomerate, meaning its environmental and social performance was reported as part of a resource-heavy enterprise dominated by plantation and oleochemical activities.³ The decision to demerge was strategically motivated by a desire to unlock the intrinsic value of the real estate portfolio and to allow the market to value the property business independently of the volatility and specific ESG challenges inherent in the palm oil industry.⁴

This separation allowed IOI Properties Group Berhad to develop a bespoke sustainability framework that addresses the specific material matters of the real estate sector, such as green building certifications, energy efficiency in managed buildings, and urban biodiversity.⁵ Since its inception in early 2014, the group has systematically moved away from the "conglomerate" style of reporting toward a more granular, project-specific disclosure model.⁴ This transition was not merely administrative but functional, enabling the group to establish its own Sustainability Steering Committee (SSC) and Sustainability Council, thereby ensuring that ESG considerations are integrated into the lifecycle of property development—from land acquisition and planning to construction and long-term asset management.⁵

ESG Report Timeline Analysis (2014–2023)

The following analysis provides a chronological examination of the most significant

developments in the group's sustainability reporting and ESG performance disclosures over the identified decade.

2014: Corporate Separation and Foundational Governance

Following its listing on January 15, 2014, the group's immediate priority was the establishment of a robust corporate governance framework as a standalone public entity.⁴ The Annual Report 2014 served as the primary vehicle for early disclosures, focusing heavily on the successful internal restructuring and the gain of RM 1.89 billion arising from the demerger.⁴ Sustainability information during this period was relatively nascent, often characterized by "Corporate Social Responsibility" (CSR) narratives rather than standardized ESG data.⁴ The group's core values—Integrity, Commitment, Loyalty, Excellence, Speed, Innovativeness, and Cost Efficiency—were formally articulated as the foundation for its future sustainability journey.⁴ These values were intended to reassure investors that the high ethical standards of the parent conglomerate would be maintained in the newly independent property arm.⁴

2015–2016: Regulatory Adaptation and Reputational Awareness

During 2015 and 2016, IOI Properties Group Berhad began adapting to the newly introduced Bursa Malaysia Sustainability Reporting Guide.¹⁹ This period coincided with a major external crisis for the wider IOI brand: the 2016 suspension of IOI Corporation Berhad from the Roundtable on Sustainable Palm Oil (RSPO) due to land disputes and environmental grievances in Indonesia.¹⁶ Although the suspension directly concerned the plantation business, it created a ripple effect across all IOI-branded entities, leading to increased scrutiny of the property group's land acquisition processes and labor practices.¹⁶ In response, the group began to emphasize its commitment to legal compliance and ethical land procurement in its annual disclosures.¹⁸ The group also started to formalize its Environmental, Social, and Governance (ESG) and Economic, Environmental, and Social (EES) models, moving toward a more structured reporting format.¹⁷

2017–2018: The Formalization of Sustainability Statements

The 2017 and 2018 reporting cycles marked the formal transition from CSR sections to dedicated Sustainability Statements within the Annual Report.¹⁸ The Sustainability Report 2018 was particularly significant, as it detailed the group's "Sustainability Journey" and established the Sustainability Council, comprising business unit heads and subject matter experts.⁶ This council was tasked with supporting the Sustainability Steering Committee in integrating ESG strategies into daily business operations.²⁰ During this phase, the group began to report specific environmental metrics, such as energy savings at IOI Square (1,574 MWh saved between 2016 and 2018) and the inclusion of communal green spaces in townships to support urban biodiversity.²⁰ The 2018 report also saw the initial alignment with the Global Reporting Initiative (GRI) Standards, reflecting a commitment to international transparency benchmarks.²⁰

2019: The Transition to Integrated Reporting

In 2019, IOI Properties Group Berhad embarked on its "Integrated Reporting Journey," a move that signaled a fundamental shift in how the company viewed value creation.²² Instead of reporting financial and non-financial data in isolation, the group adopted the International Integrated Reporting Council (IIRC) framework.²³ This framework organizes corporate performance around "Six Capitals": Financial, Manufactured, Intellectual, Human, Social and Relationship, and Natural.²⁵ The Sustainability Report 2019 included a more refined Materiality Matrix, identifying key issues such as Business Ethics, Anti-Corruption, and Anti-Money Laundering.¹⁷ A notable development in 2019 was the group's formal commitment to the United Nations Sustainable Development Goals (UNSDGs), with strategic alignment identified for several specific goals.⁶

2020: Resilience and Human Capital in the Pandemic Era

The 2020 reporting period was dominated by the group's response to the COVID-19 pandemic.⁸ Disclosures focused heavily on the "Social" pillar, particularly regarding employee health and safety, business continuity, and support for tenants and local communities during movement control orders.⁸ Despite the operational challenges, the group maintained its sustainability trajectory, with the CEO and Board emphasizing that ESG adoption provided a competitive advantage in a volatile market.⁵ The Sustainability Report 2020 served to reassure stakeholders that the group's long-term sustainability goals remained intact, even as short-term financial performance was impacted by pandemic-related closures in the hospitality and retail segments.⁸

2021: Institutional Recognition and TCFD Adoption

The year 2021 was a watershed for the group's ESG recognition. IOI Properties Group Berhad achieved a 4-star grading in the FTSE Russell ESG ratings, placing it in the top 25% of the FTSE Russell assessment universe.⁶ Additionally, the group received its first widely publicized MSCI ESG Rating of BBB.⁶ From a disclosure standpoint, 2021 saw the preliminary alignment with the Task Force on Climate-related Financial Disclosures (TCFD) recommendations, particularly regarding the governance and risk management of climate-related impacts.⁵ The group also reported significant progress in its "Created Value for Employees," documenting 89,065 hours of learning and development across the workforce.⁶

2022: Advanced Climate Strategy and MSCI Rating Upgrade

In 2022, the group significantly expanded its environmental disclosures by developing a formal Climate Action Strategy and a TCFD Roadmap.⁵ This strategy involved conducting a group-wide quantitative assessment of climate-related transition and physical risks, utilizing different climate scenarios to model financial impacts through 2050.²⁹ This level of sophistication in climate reporting contributed to an upgrade in its MSCI ESG Rating from BBB

to A.⁵ The Sustainability Report 2022 was prepared in accordance with the Bursa Malaysia Main Market Listing Requirements and with reference to the GRI Standards 2021.⁵ The group also refreshed its materiality assessment, identifying 14 material sustainability matters that would guide its "IOI Sustain Roadmap 2030".⁵

2023: Sector-Specific Disclosures and SBTi Commitment

The 2023 reporting cycle demonstrated the group’s commitment to the most rigorous international standards. For the first time, the group included a Sustainability Accounting Standards Board (SASB) index, specifically for the Real Estate sector, allowing for better comparability with global peers.⁵ The report also detailed the group’s commitment to the Science Based Target initiative (SBTi) in the Forest, Land and Agriculture (FLAG) sector, aligning its decarbonization targets with the 1.5°C pathway.²⁹ Key performance data indicated that the group had already achieved a 46% reduction in Scope 1 and Scope 2 GHG emission intensity compared to its 2015 baseline, surpassing its original 2025 target of 40% a full year early.²⁷ The 2023 report was part of a suite of "Integrated Reports" intended to provide a holistic view of the company’s resilience and future direction.²³

Institutional Ratings and External Assurance

The group’s ESG performance has been subject to increasing scrutiny and validation by international rating agencies and third-party auditors. The following table provides a summary of the group’s ratings and assessments as of the end of the 2023–2025 review cycles.

Rating Agency / Assessment	Score / Rating	Year	Analysis of Relevance
MSCI ESG Ratings	A	2022–2023	Improved from BBB; indicates a robust framework for managing material ESG risks relative to industry peers.
FTSE Russell ESG Rating	4-Star (Top 25%)	2021–2023	Key requirement for inclusion in the FTSE4Good Bursa Malaysia Index; reflects

			high standards of transparency.
Sustainalytics	21.6 (Low Risk)	2025 (Review)	Improved from 23.3; assessment of "Strong" management of material ESG issues.
S&P Global ESG Score	39	2025 (Review)	Based on the Corporate Sustainability Assessment (CSA); ranked in the 87th percentile in the Food Products/Real Estate overlap.
CDP Climate Change	B	2025 (Review)	Indicates "Management Level" performance in addressing climate change impacts and transparency.
CDP Water Security	B	2025 (Review)	Reflects effective management and disclosure of water resources and associated risks.
ISS ESG	C	2025	Maintained score; suggests room for improvement in deeper corporate governance or transparency

			metrics.

Sources: ⁵

The group has also begun to implement internal and external assurance processes to enhance the credibility of its disclosures. In the 2023 and 2024 reporting cycles, the Group Internal Audit department performed a limited review of selected environmental and social indicators to ensure the accuracy of the data collated from various business units.³² While the group has not yet engaged in full third-party reasonable assurance for its entire sustainability report, it has noted that its multiple certification audits—including RSPO, Malaysian Sustainable Palm Oil (MSPO), and various ISO standards—provide a layer of external verification for its operational performance.³²

Strategic Frameworks and Reporting Standards Analysis

IOI Properties Group Berhad’s adoption of various international reporting frameworks is a critical indicator of its transparency and its commitment to meeting the needs of global institutional investors.

Global Reporting Initiative (GRI) Standards

The group has consistently utilized the GRI Standards as the backbone of its sustainability reporting since at least 2018.²⁰ In the most recent cycles (2022–2023), the group transitioned to the GRI Standards 2021, which emphasize the impacts of the organization on the economy, environment, and people, including impacts on human rights.⁵ The use of the GRI Content Index allows stakeholders to easily locate disclosures on specific material matters, such as occupational health and safety (GRI 403), energy (GRI 302), and water and effluents (GRI 303).⁵

Task Force on Climate-related Financial Disclosures (TCFD)

The adoption of TCFD in 2021 represented a strategic move to quantify the financial implications of climate change.⁵ The group’s TCFD reporting is organized around four thematic areas: Governance, Strategy, Risk Management, and Metrics and Targets.²⁹ Key developments under this framework include:

- **Climate Scenario Analysis:** Modeling physical risks (e.g., impact of floods on property valuations) and transition risks (e.g., impact of higher electricity tariffs or carbon pricing).²⁹
- **Internal Carbon Pricing:** The group has begun exploring the use of internal carbon pricing to guide capital allocation toward low-carbon technologies and energy-efficient building designs.²⁹

- **Decarbonization Roadmap:** Setting clear targets for Scope 1, 2, and 3 emissions, including a "Net Zero by 2040" commitment.²⁹

Sustainability Accounting Standards Board (SASB)

By including a SASB Disclosure Index in its 2023 and 2024 reports, IOI Properties Group Berhad has aligned itself with the industry-specific reporting needs of financial analysts and investors.⁵ The SASB Real Estate Standard focuses on topics that are most likely to be financially material for property companies, including:

- **Energy Management:** Total energy consumed and the percentage of renewable energy used in the portfolio.⁵
- **Water Management:** Water withdrawal in regions with high baseline water stress.⁵
- **Climate Change Adaptation:** The number of properties located in 100-year flood zones and the strategies for resilience.⁵

Integrated Reporting (IR) Framework

The shift to Integrated Reporting in 2019 was designed to enhance "Integrated Thinking" within the group.²² This approach seeks to demonstrate how the group's strategy, governance, performance, and prospects—in the context of its external environment—lead to the creation of value in the short, medium, and long term.²³ The group's annual reports now clearly link the "Six Capitals" to its strategic priorities, showing how investments in human capital (training) or natural capital (green spaces) ultimately drive financial capital (property sales and recurring income).²⁵

Environmental Stewardship: Deep Dive into Decarbonization and Natural Capital

The environmental strategy of IOI Properties Group Berhad is built upon the recognition that the real estate sector is a significant contributor to global carbon emissions and resource depletion. The group's approach is a blend of "Nature-Based Solutions" and "Engineered Solutions".²⁹

Decarbonization and GHG Emissions Management

The group's decarbonization journey is guided by its Climate Change Action initiative (CCAi), launched in 2019.²⁹ The most impressive outcome of this initiative to date is the achievement of a 46% reduction in GHG emission intensity for Scope 1 and Scope 2 by the end of FY2025, measured against a 2015 baseline.²⁷ This achievement was driven by several key initiatives:

- **Methane Capture Facilities:** Implementing methane capture at palm oil mills (which, while part of the plantation side, are often included in group-wide emission intensities for the IOI brand).²⁷

- **Solar Energy Adoption:** Installing extensive solar panel arrays across its malls and office buildings. For instance, the group has reported over 22.5 MWp of solar capacity and substantial annual solar power generation, which directly reduces reliance on grid electricity.²⁷
- **Operational Eco-efficiency:** Optimizing the energy use of its investment properties, such as IOI City Mall, which has received multiple awards for energy efficiency and sustainable management.¹⁴

Circular Economy and Waste Management

The group practices the "7Rs of Circularity" to manage its finite natural resources.³⁰ In the property development segment, this involves utilizing byproducts and industrialised building systems to minimize waste generation at construction sites.¹⁴ In the resource-based manufacturing sub-segments (linked to the wider IOI Group), this includes converting oil palm trunks to palm wood or applying palm biomass as organic fertilizer.³⁰ The group has reported avoiding significant amounts of CO2 emissions through the adoption of renewable energy and the diversion of recyclable waste from landfills.²⁸

Urban Biodiversity and Conservation

As a developer of large-scale townships, the group recognizes its impact on local ecosystems. Its strategy includes:

- **High Conservation Value (HCV) and High Carbon Stock (HCS):** A strict policy of protecting HCV and HCS areas during the land development process.²¹
- **Urban Green Spaces:** Integrating communal green spaces and "pocket parks" into its townships to support urban biodiversity and improve the well-being of residents.¹⁷
- **Zero-Burning Policy:** Strict enforcement of a zero-burning policy for land clearing, mitigating the risk of forest fires and haze.²¹

Social Responsibility: Human Capital, Diversity, and Community

The "Social" pillar of the group's ESG strategy focuses on the welfare of its people and the empowerment of the communities in which it operates.

Labor Practices and Migrant Worker Welfare

The group has been proactive in addressing concerns regarding the treatment of migrant workers, particularly in light of industry-wide scrutiny.¹⁶ Key initiatives include:

- **No Recruitment Fee Policy:** Committing to the principle that workers should not pay for their jobs. The group has established mechanisms to monitor and, where necessary, remediate issues related to recruitment fees.³⁰

- **Grievance Mechanisms:** Providing transparent and accessible channels for workers and stakeholders to report concerns. The group's "Grievance Update" reports show that allegations related to mistreatment, PPE inconsistency, or wage disagreements have been systematically investigated and addressed.³⁹
- **Housing and Welfare:** Investing millions in upgrading housing facilities for workers, ensuring that they have access to safe and dignified living conditions.³²

Diversity and Inclusion

IOI Properties Group Berhad has consistently demonstrated a strong commitment to gender diversity. As of 2019, the group reported that 36% of its senior management positions were held by women.¹⁷ By the 2022–2023 reporting periods, this figure reached approximately 41% across overall management roles.²⁸ This focus on inclusion is part of a broader strategy to nurture a diverse workforce that can drive innovation and better understand the needs of a diverse customer base.⁶

Community Investment and Infrastructure

The group views community development as an integral part of its value creation process. Its social initiatives include:

- **Social Infrastructure:** Contributing to the development of community infrastructure, such as roads, schools, and community centers, with investments totaling over RM 26 million in some years.²⁸
- **Community Support Programs:** Investing in education and social welfare programs through the Yayasan Tan Sri Lee Shin Cheng foundation, benefiting thousands of individuals.⁶
- **Affordable Housing:** While primarily a premium developer, the group has been recognized for its efforts to provide affordable and practical homes, bridging the housing affordability gap in Malaysia.⁴⁰

Governance, Ethics, and Integrity

Governance is the bedrock upon which IOI Properties Group Berhad's ESG strategy is built. The group's governance framework is designed to ensure that sustainability is not a "side project" but a core business function.

Sustainability Governance Structure

The group's sustainability is overseen by the Board of Directors, with the Sustainability Steering Committee (SSC) led by the CEO.⁵ This structure ensures that ESG risks and opportunities are considered at the highest levels of decision-making.⁵ The Sustainability Council and the Group Corporate Sustainability department are responsible for the execution and monitoring of the

strategy across the group's business units.⁶

Business Ethics and Anti-Corruption

Integrity is one of the group's most essential core values.⁴ To uphold this value, the group has implemented:

- **Anti-Corruption Policy:** Formally committed in FY2019, this policy aligns with the Malaysian Code on Corporate Governance and the MACC Act.⁵
- **Whistleblowing Policy:** Ensuring that stakeholders can report unethical conduct without fear of retaliation.⁵
- **Transparency in Disclosure:** Committing to the timely and accurate disclosure of financial and non-financial information to investors, as evidenced by the group's "Integrated Reporting" approach.²³

Analysis of Controversies and Grievance Resolution

No comprehensive ESG analysis is complete without an examination of the challenges and controversies the group has faced. The legacy of the wider "IOI" brand has been marked by several significant controversies that have shaped the current group's approach to sustainability.

The IOI Pelita Land Dispute (Sarawak)

One of the most long-standing land disputes in the Malaysian plantation sector involved IOI Pelita Plantation (a joint venture) and local communities in the Tinjar area of Sarawak.⁴¹ The dispute, which began before IOI Corporation acquired its interest, centered on native customary rights versus state legal ownership.⁴² In 2022, a landmark final settlement was reached where IOI Pelita agreed to excise 4,615 hectares of land to be gazetted as Native Communal Reserve for the affected communities.⁴² This resolution, facilitated by the RSPO and various NGOs, is viewed as a significant milestone in how corporate entities can resolve legacy land conflicts through the Free, Prior, and Informed Consent (FPIC) process.⁴¹

RSPO Suspension (2016)

In March 2016, IOI Corporation Berhad was suspended from the RSPO following complaints regarding land clearing and peatland drainage by its subsidiaries in Indonesia.¹⁶ This suspension had a major financial impact, as 27 corporate clients (including Unilever, Nestlé, and Mars) canceled contracts.¹⁶ Although the suspension was lifted in August 2016 after the group submitted an action plan, the event served as a critical "wake-up call" for the entire IOI brand.¹⁶ It catalyzed a fundamental shift in the group's sustainability governance, leading to the development of the "Nature Positive" strategy and the adoption of more rigorous environmental monitoring technologies.²⁹

Labor Grievances and NGO Pressure

The group has faced ongoing pressure from labor rights activists and NGOs like Finnwatch regarding the recruitment and treatment of migrant workers.²¹ Allegations of passport retention, inadequate PPE, and excessive recruitment fees have been raised.³⁹ The group's response has been to systematically address these grievances through its transparent grievance mechanism and to implement the "No Recruitment Fee" policy across its entire operations.³⁰ This proactive engagement with critics has been key to the group's ability to improve its ESG ratings and regain institutional investor confidence.⁵

Financial Performance and ESG Connectivity

IOI Properties Group Berhad's financial performance is increasingly tied to its ESG performance. In the most recent financial updates (Q1 FY2026), the group reported a 41% increase in revenue to RM 969 million and a fivefold increase in profit before tax to RM 754 million.⁴³ While these gains were largely driven by the acquisition of South Beach in Singapore and remeasurement gains, the group's "recurring income" from its investment properties—many of which are green-certified—has grown significantly.¹²

The group's high net gearing (0.95x as of Q1 FY2026) is being managed through a strategy of "land monetization" and a potential REIT listing.¹⁰ The ability to attract favorable financing for these strategic moves is heavily dependent on the group's "Shariah-compliant" status and its inclusion in ESG-focused indices like the FTSE4Good.¹⁰ The connectivity between its "Six Capitals" is clear: by maintaining high-quality, sustainable assets (Manufactured and Natural Capital), the group ensures high occupancy rates and premium rents (Financial Capital), supported by a skilled and diverse workforce (Human Capital).¹⁰

Reference Table and Credibility Assessment

The research for this report utilized a wide range of primary and secondary sources, as detailed in the table below.

#	Reference (APA 7th edition format)	Source Type	Credibility Score (0–10)	Justification for Score	Relevance to Query

Transparency and Limitations

This analysis is conducted based on data available as of March 18, 2026. The information is primarily sourced from publicly available corporate disclosures, regulatory announcements, and independent ratings and NGO reports. It is important to note the following limitations:

- **Knowledge Cutoff:** The report reflects performance and disclosure data up to the identified date. Subsequent developments or restatements by the company may not be captured.
- **Paywalled Data:** Certain proprietary research reports from analysts or detailed credit rating reports from Moody's or S&P Global may not be fully accessible for extraction of granular figures, although their general findings (e.g., rating outlooks) have been

integrated.¹⁰

- **Verification of Claims:** While "Verified Facts" are distinguished by primary source citations, some forward-looking statements or qualitative claims made by the company (labeled "Interpretive Analysis" or based on company self-reporting) may lack full third-party assurance.³⁰
- **Brand Ambiguity:** There is inherent brand overlap between IOI Corporation Berhad (plantation) and IOI Properties Group Berhad (real estate). This report has made every effort to distinguish the specific impacts of the property group, but global ESG ratings sometimes assess the "IOI brand" as a single entity.¹⁶

For independent verification of the group's sustainability data, stakeholders are encouraged to visit the following authoritative databases:

1. **Bursa Malaysia Sustainability Disclosure Portal:** The central repository for all Malaysian PLCs' ESG reporting.
2. **GRI Sustainability Disclosure Database:** To view historically archived reports in a standardized global format.
3. **The MSCI ESG Ratings Search Tool:** To track the group's rating trajectory and comparative industry standing.

Conclusion

The decade-long trajectory of IOI Properties Group Berhad (2014–2023) reveals a company that has successfully moved from the shadow of a diversified conglomerate to become a standalone ESG leader in the Southeast Asian real estate market. The group has navigated significant reputational challenges by embracing international reporting standards—GRI, TCFD, SASB, and Integrated Reporting—and by implementing robust internal governance structures.⁵ Its achievement of a 46% reduction in carbon intensity and its upgrade to an MSCI "A" rating serve as evidence of a strategy that successfully connects environmental stewardship and social responsibility with long-term financial resilience.⁵ For professional analysts and institutional investors, IOI Properties Group Berhad provides a compelling example of how a firm can transform operational "Integrity" and "Excellence" into a quantifiable competitive advantage in an increasingly ESG-driven global marketplace.⁴
